

PROMPT LIFE V0.10

Visual Identity Reset Report

A calming futuristic learning garden: anime meets Tron, Japanese origami meets paper-cut interface, and zen garden calm meets neon computational depth.

- ZenTron Origami
- Mobile-first at 390px
- Internal review artifact

What Is Done

- Created the v0.10 style guide and implementation notes.
- Expanded design tokens for color, spacing, radius, shadows, glow, typography, motion, z-index, card depth, and paper layers.
- Added the hidden internal route /review/style-guide.
- Lightly refreshed the app shell, cards, chips, visual-aid frames, Brain Bridge styling, and bottom nav.
- Tagged visual aids with style variants and redesigned the RAG visual as the retrieval-shelf pilot.
- Bumped the visible Badge version to v0.10.0.

Files Changed

- src/styles/promptlife.tokens.css
 - src/styles/global.css
 - src/components/VisualAids.tsx
 - src/main.tsx
- docs/design/PROMPT_LIFE_STYLE_GUIDE_V0_10.md
 - docs/design/STYLE_IMPLEMENTATION_NOTES_V0_10.md
 - docs/REVIEW_NOTES.md
 - docs/screenshots/v0-10-*.png

How To Run Locally

- `cd /Users/kevinhegg/Desktop/promptlife`
- `npm install`
- `npm run dev`
- Open `http://localhost:5173/` on this Mac, or use Vite's printed Network URL from your iPhone on the same Wi-Fi.
- After the GitHub Pages deploy, test the pushed main branch at `https://kevinhegg.github.io/promptlife/`.

Verification

- `npm install`: passed, 0 vulnerabilities.
- `npm run typecheck`: passed.
- `npm run build`: passed.
- `git diff --check`: passed.
- Chrome mobile viewport audit at 320px, 390px, and 430px: no document/body overflow for Home, /review/style-guide, or /review/visual-aids#rag-retrieval.

Next Three Best v0.11 Improvements

- Apply the v0.10 visual language to Context Window, Attention, MLP, Hidden States, Logits, Softmax, Sampling, and Autoregression.
- Refresh older PNG art and concept animation panels so they stop feeling like a previous visual era.
- Add automated mobile visual checks for the style guide, RAG pilot, bottom nav, glossary drawer, Badge version, and progress reset.

Mobile UI Captures

PROMPT LIFE V0.10.0

ZenTron Origami

Internal visual identity playground for the v0.10 calming futuristic learning garden.

1. COLOR SWATCHES

Rice paper, mist, ink, and glow

Rice paper

--pl-bg
#F7F5EF

Mist blue

--pl-bg-mist
#EAF3F4

Paper surface

--pl-surface-paper
#FFFDF8

Ink navy

--pl-ink
#07124A

Deep indigo

--pl-indigo
#121E72

Cyan glow

--pl-cyan
#35E6E2

Soft teal

--pl-teal
#0FA8A4

Violet glow

--pl-violet
#7A5CFF

Internal style guide route with v0.10 color system and typography.

A DAY IN THE LIFE OF A PROMPT

Prompt Life

Model literacy for the AI era: clear mechanics, useful metaphors, and a little play.

CURRENT PATH

Start at the beginning

0% complete. Next stop: What Is an LLM?.

Wider AI Literacy

GUIDED COMPARISONS

Run and compare

Use these when the map feels abstract: one guides a prompt through the model, the other compares how AI systems learn.

Prompt Run

How AI Learns

1

Before Morning

What an LLM is, where it came from, and how training, pretraining, overfitting, fine-tuning, and alignment shape it before ordinary use.

The prompt has not arrived yet. The model is being shaped before ordinary use.

RAG-RETRIEVAL

Open-Book Retrieval

Lesson: RAG and Retrieval

Pattern: rag

Variant: retrieval-shelf

Open-Book Retrieval

Retrieval plus context, not training

Retrieved notes enter the context before response tokens are generated.

- 1 Ask** The user prompt starts the run.
- 2 Retrieve** A search system finds relevant outside material.
- 3 Add to context** Retrieved notes become temporary context tokens.
- 4 Generate** The model still generates response tokens one at a time.
- 5 Weights stay fixed** RAG does not normally update model weights.

Key takeaway:

RAG is retrieval plus context, not training.

LEARNING OBJECTIVE

Show that RAG retrieves outside information and places it into context; it does not train the model.

ACCESSIBLE DESCRIPTION

The RAG diagram moves from Prompt to Retriever to Notes, then into a Context tray and Generated response, with a separate fixed-

weights note.

MOBILE PREVIEW

Review at 320px, 390px, and 430px; diagram

Labels must stay inside the canvas

RAG pilot visual: retrieval plus context, not training.

6. BRAIN BRIDGE CARD

Helpful comparison, then the limit

Helpful, then limited

HELPFUL COMPARISON

Like looking something up in notes before answering a question.

WHERE IT BREAKS

The model is not consciously judging the source. It is still generating likely tokens.

7. CHECKPOINT CARD

Dojo practice, not a trap

CHECKPOINT

What does RAG usually do?

- 1** Retrieves outside information into the current context.
- 2** Permanently changes the model weights.

Brain Bridge and checkpoint preview cards.
