

Prompt Life Exercise System Report

Generated by Codex on May 31, 2026. Scope: reusable exercise system, starter exercise library, lesson wiring, progress storage, reset behavior, docs, verification, and screenshots.

Status	Complete. Typecheck, production build, mobile QA, screenshot capture, and reset verification passed.
Core change	Reusable exercises with Goal, Do this, Try area, Feedback, and Why this matters.
Progress	Exercise completion, attempts, last answers, and insights are stored under promptlife:v1:exerciseProgress.

Files Changed

- src/data/exercises.ts
- src/components/ExerciseSystem.tsx
- src/main.tsx
- src/styles/global.css
- README.md
- docs/EXERCISE_SYSTEM.md
- docs/STORAGE_AND_RESET.md
- docs/PRODUCT_BLUEPRINT.md
- docs/ANIMATION_SYSTEM.md
- docs/REVIEW_NOTES.md
- docs/screenshots/v0-4-*exercise*.png

What Is Done

- Added a typed exercise schema with ten starter exercises.
- Added reusable exercise components for tap-choice, tap-multiple, sort-buckets, connect-nodes, toggle-state, label-tokens, next-token-pick, drag-order, drag-match, and type-reflection.
- Mapped more than eight lessons to the new exercise pattern, including prompt/response, training, inference, attention, softmax, sampling, autoregression, and context window topics.
- Added the Durable or Temporary exercise to How AI Learns.
- Added exercise progress to localStorage and Badge progress.
- Updated reset controls so exercise progress is cleared with the rest of Prompt Life progress.
- Documented the exercise system, storage behavior, review notes, and product blueprint updates.

Run Locally

```
cd /Users/kevinhegg/Desktop/promptLife
npm install
npm run dev
```

Build checks:

```
npm run typecheck
```

```
npm run build
```

Verification

- npm install passed with no vulnerabilities.
- npm run typecheck passed.
- npm run build passed.
- 390px browser QA covered exercise instructions, wrong feedback, correct feedback, retry/reveal controls, touch controls, and Badge progress.
- Reset verification passed: exercise progress and lesson progress reset, while unrelated localStorage remained untouched.

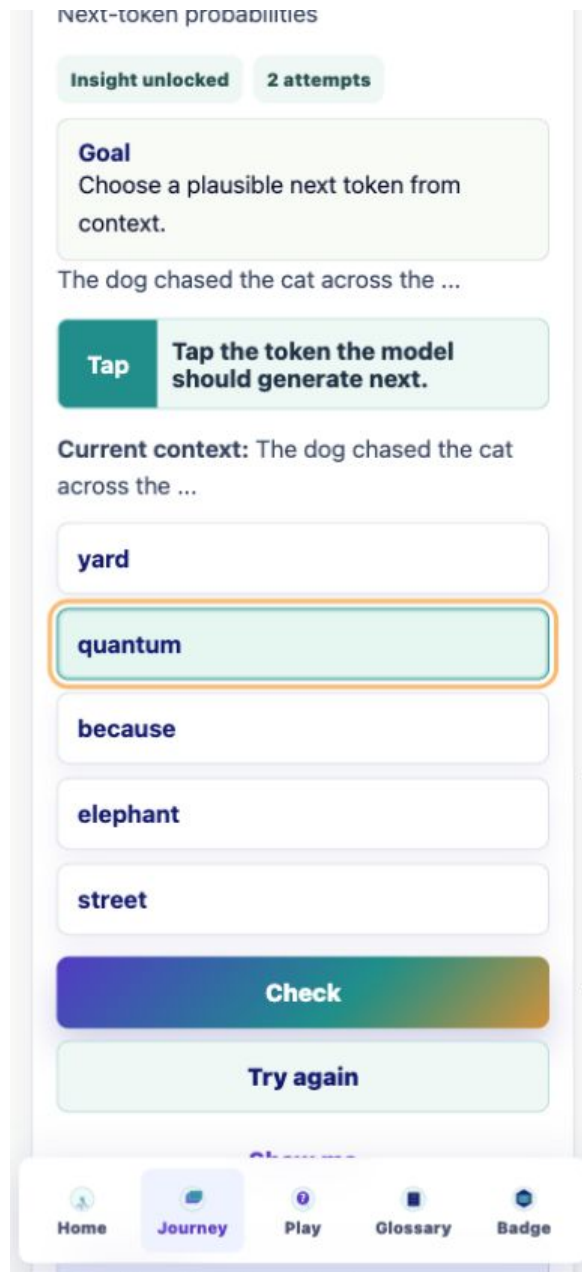

Next Three Improvements

- Add automated tests for every exercise input type and storage reset behavior.
- Add Playwright or axe accessibility checks for keyboard flow, focus visibility, and live feedback announcements.
- Add richer pointer drag behavior while keeping the current button-based keyboard fallback.

Screenshots

Mobile-width screenshots from the exercise system implementation.

Lesson with clear tap-choice exercise

Prompt or Response label-token exercise

apart from a generated response token.

The dog chased the cat across the ...

Label Label the first seven tokens as Prompt and yard as Response.

Prompt **Response**

The Tap to label	dog Tap to label
chased Tap to label	the Tap to label
cat Tap to label	across Tap to label
the Tap to label	yard Prompt

Durable or Temporary sorting exercise

Durable or Temporary?

Training versus inference-time steering

Practice mode

0 attempts

Goal

Sort learning and steering processes by what they actually change.

Some processes change model weights.
Others only change what the model can see right now.

Sort

Sort each item into Durable weight change, Temporary current-run steering, or Retrieval, not learning.

Attention connect-nodes exercise

Attention Is Relevance

Attention-like relevance between token positions

Practice mode

0 attempts

Goal

Connect the pronoun to the token it most likely depends on.

The dog chased the cat because it ran.

Connect Connect it to the most likely referent.

Target: connect **it** to its likely referent.

The

dog

chase
d

the

cat

beca
use

it

ran

Connection: it -> cat

Wrong answer feedback

Tap the word that should generate next.

Current context: The dog chased the cat across the ...

yard

quantum

because

elephant

street

Check

Try again

[Show me](#)

Not quite.
quantum is possible in the vocabulary, but unlikely in this local sentence context.
Try again with the misconception in mind.

Insight unlocked: The model chooses

Why this matters

Correct answer feedback

Tap the word that should generate next.

Current context: The dog chased the cat across the ...

yard

quantum

because

elephant

street

Check

Try again

[Show me](#)

Insight unlocked.
Good. yard and street are plausible continuations from context.
The model chooses from probabilities, not certainty.
