

Context Stack v2 Report

Context Stack is now a three-round shared Play challenge about the context window: visible now is not the same as remembered forever.

What Changed

Shared Play Shell

Context Stack now uses the shared Play challenge shell, header, status pill, progress rail, board, choice buttons, feedback panel, action row, scroll hint, token chips, and completion panel.

Three Rounds

1. Basic context window: old cards fall out when the window fills.
2. Important detail falls out: keep the goal, constraint, and evidence visible.
3. Retrieved evidence enters context: retrieval helps only after it is placed in context.

Progress Tracking

Attempts, round progress, completion, review suggestions, best progress, outcomes, and misconception tags now write through

`promptlife.playChallenges.v1`.

Copy Cleanup

Learner-facing Play and Badge copy now says practice challenges, practice set, and coming soon instead of foundation/slate wording.

Learning Design

Core idea: **visible now is not the same as remembered forever**. The model can use what is inside the current context window; older material can fall out; retrieved evidence helps only if it enters context.

Round Feedback

- This card is visible to the model now.
- This card fell out of the window.
- Retrieved evidence helps only after it enters context.
- Good stack.
- Review suggested.

Preserved

- No new game engine, dependencies, leaderboard, timer, or score emphasis.
- Journey progress, checkpoint randomization, and badge rules unchanged.
- Legacy Context Stack insight/progress keys preserved for compatibility.

LocalStorage

- Read/written/updated: `promptlife.playChallenges.v1`
- Preserved legacy Context Stack keys: `promptlife:v1:gameInsights`, `pl.gameInsights`
- Preserved Prompt Run bridge keys: `promptlife:v1:promptRunProgress`, `pl.promptRunProgress`
- Preserved Prompt Run completion keys: `promptlife:v1:traceComplete`, `pl.traceComplete`
- Preserved learning-tour bridge keys: `promptlife:v1:learningTourComplete`, `pl.learningTourComplete`
- Preserved independent Dojo key: `promptlife.glossaryDojo.v1`
- Preserved existing Journey, exercise, reflection, choice-order, and Prompt Run keys.

Verification

Commands

- `npm run typecheck`: passed.
- `npm run build`: passed with existing Vite large-chunk warning.
- `npm run build:pages`: passed with existing Vite large-chunk warning.
- `npm run audit:answers`: passed.

Mobile QA

Play loaded, Context Stack opened, all three rounds completed, review-suggested and completed outcomes were possible, reset cleared shared Play progress, Badge loaded, and no horizontal overflow was detected at 320px or 390px.

Known Issues

Probability Picker remains safely coming soon. Attention Match still uses the compatibility route rather than a purpose-built final challenge. The existing production bundle large-chunk warning remains.
