

PROMPT LIFE V0.24.3 · GENERATED 2026-06-07

Glossary Dojo Term Question Repair

Repaired Glossary Dojo term-question wording and distractor quality while preserving Journey progress, badge logic, games, generated assets, dependencies, and checkpoint randomization.

What Changed

- `term_to_definition` now displays **TERM TO DESCRIPTION**, asks **What is [TERM]?**, and uses **Choose the best description**.
- `definition_to_term` now displays **DESCRIPTION TO TERM** and asks **Which term matches this description?**
- `closest_concept` now uses the less gamey label **RELATED IDEAS**.
- Feedback now reads as natural descriptions: **Insight strengthened. [TERM] is...** and wrong answers identify the selected wrong term.
- Visible app version is now **v0.24.3**.

Distractor Strategy

Term questions now prefer closer conceptual neighbors before distant fallback choices: confusable, related, cluster, same-stage, near, medium, far, then global.

New concept clusters support context, tokenization, representations, decoding, training, evidence, and costs/governance.

QA Examples

Target	Prompt	Close distractors checked
Input context	What is Input context?	Memory, Prompt, Context window
Tokenization	What is Tokenization?	Tokenizer, Token ID, Token
Hidden state	What is Hidden state?	Memory, Weight, Embedding
RAG	What is RAG?	Retrieval, Grounding, Training
Softmax	What is Softmax?	Logits, Sampling, Probability
Water use	What is Water use?	Data center, Energy use, Governance

Verification

typecheck passed

build passed

**build:pages
passed**

audit passed

Both production builds still emit the existing Vite large-chunk warning.

Question 1 of 1

TERM TO DESCRIPTION

What is Input context?

Choose the best description.

A

The limited amount of tokens or media the model can consider at once.

B

The input given to the model, including user text, system instructions, conversation history, retrieved material, or other context.

C

A durable store of information available later.

D

Everything currently visible to

Question 1 of 1

TERM TO DESCRIPTION

What is Input context?

Choose the best description.

A

Everything currently visible to the model: prompt tokens, conversation history, retrieved documents, and already-generated response tokens.

B

A durable store of information available later.

C

A high-priority instruction supplied by the AI system to steer behavior during the

Instructions, conversation history, retrieved material, or other context.

D

Everything currently visible to the model: prompt tokens, conversation history, retrieved documents, and already-generated response tokens.

Correct match

Not quite. That description is for Context window. Input context is everything currently visible to the model: prompt tokens, conversation history, retrieved documents, and already-generated response tokens.

Question 1 of 1

TERM TO DESCRIPTION

What is Tokenization?

Choose the best description.

- A** The step that splits text into model-readable tokens that can be represented as token IDs.
- B** A model-readable chunk of text, such as a word, word piece, punctuation mark, space, or other tokenizer chunk.
- C** The number assigned to a token so the model can look up its learned starting vector.
- D** The rules and vocabulary that

Question 1 of 1

TERM TO DESCRIPTION

What is Hidden state?

Choose the best description.

- A** A temporary context-shaped internal vector for a token at a particular model layer.
- B** A learned starting vector retrieved for a token ID.
- C** A learned number inside the model that shapes how signals are transformed.
- D** A durable store of information available later.

Question 1 of 1

TERM TO DESCRIPTION

What is RAG?
Choose the best description.

A Connecting a model response to available evidence, such as retrieved documents, cited sources, data, or tool results.

B Finding external material and placing it into the current context for the model to use.

C Retrieval-augmented generation: retrieving outside information and placing it into the model context before generation.

Known Issues

- Archival v0.22/v0.19 Dojo docs and screenshots still show older wording as historical records.
- Relationship and stage-location question families still depend on available metadata and can fall back when metadata is thin.
