

PROMPT LIFE V0.25.1 · GENERATED 2026-06-07

Glossary Dojo Live Wording Purge

Removed stale neighbor/neighborhood wording from learner-facing Glossary Dojo UI, including a render-time guard for old saved localStorage rounds.

What Changed

- Normal new Dojo rounds now use only **term_to_definition** and **definition_to_term** during this purge pass.
- **closest_concept** remains enabled for explicit clean specs, stored clean specs, and deterministic QA, with prompt **Which idea is closest to [TERM]?**.
- Dojo question labels, prompts, and helpers are guarded at creation and render time, so stale saved rounds fall back to safe copy.
- Hidden state related choices now prefer representation terms such as Embedding, Layer, Memory, and Activation.
- Visible app version bumped to **v0.25.1**.

Phrases Removed

The purge covers the stale Dojo wording around learning-neighborhood/neighbor language, map-the-term language, term/meaning labels, and old definition-question wording. Historical docs may retain these as archival notes.

Hidden State QA

Forced target	Hidden state
Expected prompt	Which idea is closest to Hidden state?
Expected helper	Choose the closest related term.
Displayed options	Embedding, Layer, Memory, Activation
Result	Passed. No stale wording appeared, choices were terms only, and there was no horizontal overflow at 390px.

Verification

typecheck passed**build passed****build:pages
passed****audit passed**

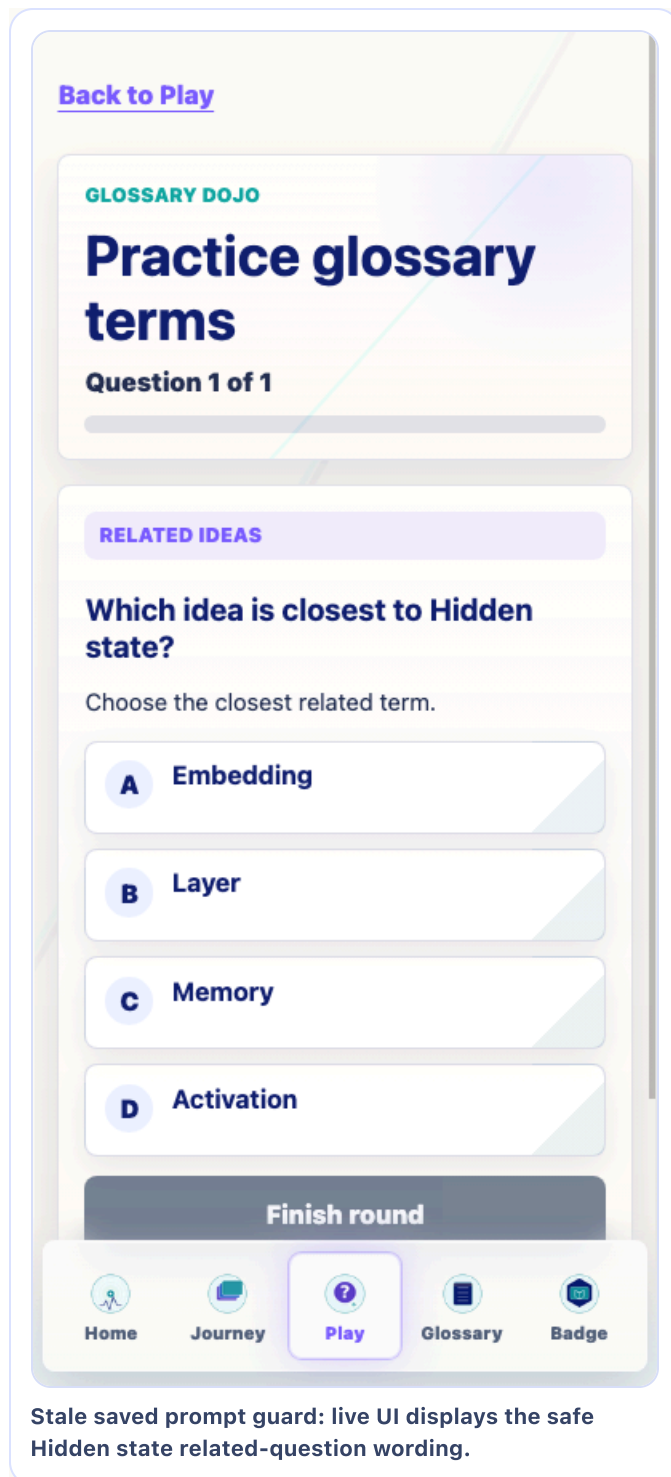

- Built-output search for **learning neighborhood**: 0 hits.
- Built-output search for **neighbor of**: 0 hits.
- Related stale Dojo phrase built-output search: 0 hits.

Both builds still emit the existing Vite large-chunk warning.

Cache Note

For GitHub Pages or iPhone Safari testing, use a cache-busting URL such as **?v=0251** or clear site data if an older bundle appears.

Screenshot

Known Issues

- Historical reports and screenshots still preserve older wording as archival evidence.
- Some non-Dojo Journey checkpoint questions still begin with old-style wording; Journey cards were intentionally not changed in this pass.
