

PROMPT LIFE V0.22

Glossary Dojo V2 Question Design + Results Repair

Date: 2026-06-07

This report wraps the implementation summary, verification results, and representative screenshots for the Glossary Dojo V2 pass.

What Changed

- Term-to-definition questions now ask `What does [TERM] mean?` and show definitions only.
- Definition-to-term questions now show the definition once and use term-only choices.
- Closest/confusable prompts use plain helper copy: `Choose the closest related term.`
- Distractors use learning-path proximity before related-term and global fallbacks.
- Stored rounds now support exact repeat rounds and missed-question review rounds.
- The results screen now emphasizes calm round reflection instead of score-like mastery language.

Verification

typecheck: passed

build: passed

build:pages: passed

audit:answers: passed

diff whitespace: passed

browser overflow: 0

Builds passed with the existing Vite large-chunk warning. Browser QA used an isolated profile and reported zero Journey progress mutations.

Representative Screenshots

Term To Definition

Definitions only; no term labels inside the answer choices.

TERM TO MEANING

What does Response token mean?

Choose the best definition.

- A** AI systems that create new text, images, audio, code, video, or other media.
- B** A reason-first tradition that emphasizes explicit principles, rules, and logic.
- C** A token generated by the model during response generation.
- D** The sequence of tokens the model generates after processing the current context.

Wrong Feedback

Feedback names the represented wrong term and the correct term.

TERM TO MEANING

What does Response token mean?

Choose the best definition.

A AI systems that create new text, images, audio, code, video, or other media.

Your choice

B A reason-first tradition that emphasizes explicit principles, rules, and logic.

C A token generated by the model during response generation.

Correct match

D The sequence of tokens the model generates after processing the current context.

Not quite. That definition is for Generative AI. Response token means A token generated by the model during response generation.

Results And Round Actions

Results From This Round

Shows questions, correct, to review, rounds attempted, repeated, and mastered over time.

Results from this round

12 questions

7 correct

5 to review

1 round attempted

0 repeated

0 mastered over time

Mastery grows across rounds. One round is practice, not a final judgment.

A term is mastered after repeated correct practice across rounds.

Known Issues

- Some glossary definitions repeat the term, producing feedback like `AI means AI is...`.
- Relationship and stage-location questions depend on existing metadata and fall back when metadata is thin.
- The existing Vite large-chunk warning remains.
