

Prompt Life v0.28.0 Visual Aid Human Feedback Sheet

Generated 2026-06-13T17:11:29.405Z for Prompt Life v0.28.0.

Prompt Life is under construction and preparing for small human testing. The badge is not issued yet. Please look for visual clarity, not perfection.

For Each Visual Aid You Notice

- What do you think the picture is trying to show?
- What part helped?
- What part confused you?
- Could you read the labels?
- Did the caption explain the picture?
- Did the visual feel necessary or decorative?
- Did it help you understand the model?
- What would you remove or simplify?

Please Flag

- Tiny text
- Unclear arrows
- Too many objects
- Unexplained jargon
- Decorative but unhelpful art
- A visual that contradicts the lesson
- A visual that feels like a generic AI picture

Visuals To Watch Closely

- Full Chain Map: This is the top later-coded redesign candidate; testers should flag overload.
- Borrowed Flames: Avoid cramming source labels; social meaning belongs in callouts.
- Cost Ledger: No fake statistics; keep categories in HTML.
- Benefit Tiers: Avoid implying all benefits are proven or automatic.
- Accountability Flow: Avoid generic AI-person imagery that implies the model has agency.
- Learning Modes Matrix: Watch whether matrix labels feel too small at 320px.
- Media Lane Map: Reduce nodes later if testers call it busy.
- Better-AI Control Panel: Panel may feel dense; testers should flag unreadable lever labels.

- Fine-Tuning Path: Tester should check whether the metaphor needs a stronger coded comparison later.
- Feature Vector: Distributed side may feel abstract; tester feedback should guide simplification.

How To Report

For each confusing visual, note the card title, what you thought it meant, and where your attention went first. It is especially useful to say whether the caption fixed the confusion or whether the picture itself needs to be simpler.
