- tap-transform: 1
- tap-stack: 1
- tap-multiple: 3
- tap-compare: 1
- match-lanes: 1
- order-sequence: 1

Fixed

- Renamed the alignment exercise data item id from policy-filter to runtime-policy-filter while preserving the visible label "policy filter"; this removes a same-exercise id collision risk without changing learner copy.

Deferred

- Six P2 interactions are kept for human testing because they are clear enough for now but need tester feedback on replay value or abstraction level.
- No Journey exercise is recommended for immediate cut before small human testing.
- No Journey exercise is recommended to move to Play in this pass; Play remains unchanged by requirement.
