

Home Hero Refinement

Focused Home-page polish pass: sharper mission copy, stronger hierarchy, a more intentional logo area, and a stable prompt-cloud visual slot ready for future generated Home assets.

What Changed

Copy

Added the prominent Home subhead `Demystifying LLMs` and replaced `clear mechanics` with `clear explanations`.

Hero

The existing textless prompt-cloud image now sits in a deeper indigo/cyan/violet frame that better matches the generated asset direction.

Logo

The top mark now has a deliberate square frame and the app has a standard favicon link using the current square mark.

Layout

The Home cards use tighter spacing, with `Continue Learning` secondary and `Big Idea` peeking into the first mobile viewport.

Final Home Copy

- Eyebrow: `A DAY IN THE LIFE OF A PROMPT`
- Main title: `Prompt Life`
- Prominent subhead: `Demystifying LLMs`
- Tagline: `Demystifying LLMs in the AI era through clear explanations, useful metaphors, and a little play.`
- Big idea: `An LLM is not a mind, a database, or magic. It is a learned prediction system that turns context into likely next tokens.`

Asset Readiness

- Future hero path: `public/assets/generated/home/home-hero-prompt-cloud.png`
- Future mark path: `public/assets/generated/home/promptlife-mark.png`
- Planned Home asset metadata added in `src/data/visualAssets.ts`.
- Current fallback hero and mark remain in use until the generated files are available.

Verification

typecheck passed

build passed

build:pages passed

browser QA passed

- `npm run typecheck`: passed.
- `npm run build`: passed with the existing Vite large-chunk warning.
- `npm run build:pages`: passed with the existing Vite large-chunk warning.
- Mobile QA: 390px and 320px passed with no horizontal overflow and no clean-tab console errors.

Known Issues

- The current Home hero image is still the existing fallback illustration; the new generated Home hero has not been added yet.
- The existing Vite large-chunk warning remains.

Next Three Recommended Steps

- Generate and integrate the Home hero prompt-cloud asset.
- Generate and integrate the square Prompt Life mark for app icon/favicon/social use.
- After those assets land, re-check Home at 320px, 390px, and on iPhone.
