

v0.21 Decision Room Stage Audit

Documentation-only audit of Logits, Softmax, and Sampling. The stage order is correct, but the next pass should strengthen raw-score, probability-not-truth, and one-token decoding distinctions using coded SVG visuals and small non-competitive interactions.

Cards Audited

Logits

Accurate but thin. Needs its own raw-score visual and interaction.

Softmax

Needs before/after values showing probabilities sum to one.

Sampling

Strongest current bridge to append-and-repeat, but should show weighted probabilities.

Major Findings

- Decision Room still uses the older slim lesson schema.
- Probabilities are not truth guarantees, but that distinction needs to appear directly in each card.
- Logits and Softmax are textually distinct, but their interactions overlap.
- No Image 2 assets are recommended. Use coded SVG/HTML for all three visuals.
- Sampling should keep temperature simple and keep top-k/top-p mostly in glossary or optional deep copy.

Decision Room

The model scores and chooses one next token.

The model has processed the context and is choosing the next response token.

FOCUS

How one next token is chosen.

KEEP CLEAR

Probabilities are not truth guarantees.

counter

quantum

elephant

Sampling chooses one next token.
Current pick: floor.

The same prompt can vary because sampling may choose among likely candidates.

CHECKPOINT

When the model chooses one token, what happens next?

A The model permanently learns the token

B The model writes the whole response at once

Sampling tiny interaction: useful, but very easy.

chooses one token.

CHECKPOINT

Where do probabilities come from in this path?

A The model asks a database

B Training rewrites the weights

C Softmax converts logits

Not quite. Logits are raw scores; softmax turns them into probabilities. Choose another answer to retry.

REFLECT

Teach it back in one sentence.

Reflection is available in Learn mode.

Verification

- `npm run typecheck`: **passed**
- `npm run build`: **passed** with the existing Vite large-chunk warning
- `npm run build:pages`: **passed** with the existing Vite large-chunk warning
- `npm run audit:answers`: **passed**
- Screenshot QA: **passed**; temporary profile progress stayed `[]`.

Known Issues

- The worktree also contains pre-existing uncommitted v0.19.3 Glossary Dojo and v0.20.1 Workday files.
- The in-app browser did not deliver nav click events reliably, so screenshots were captured with a temporary headless Chrome profile.
- Bottom nav can appear over the bottom edge of tall screenshots, though controls remained reachable.
