

Bottom Nav Icon Legibility Report

Date: June 5, 2026

This report wraps the small UI pass that makes the bottom navigation icons easier to identify on mobile.

What Changed

- Bumped the visible app version to `v0.17.5`.
- Increased live bottom nav icon width from `1.3rem` to `1.95rem`, a 50% increase.
- Raised bottom nav button height from `56px` to `66px` so icons and labels have room.
- Updated the internal style-guide bottom-nav mock to match the live nav sizing.

Files Changed

- `src/main.tsx`
- `src/styles/global.css`
- `docs/REVIEW_NOTES.md`
- `docs/stage-audits/v0-17-before-morning/screenshot-index.md`
- `docs/stage-audits/v0-17-before-morning/screenshots/v0-17-5-bottom-nav-icons.png`

Verification

- `npm run typecheck`: passed.
- `npm run build`: passed with the existing Vite large-chunk warning.
- `npm run build:pages`: passed with the existing Vite large-chunk warning.
- Browser QA at 390px: icons render at about `31px` square, labels remain visible, and the dock stays inside the mobile viewport.

Known Issues

The existing Vite large-chunk warning remains. No navbar-specific issue was observed.

Updated bottom nav. Icons are 50% larger and remain paired with readable labels.
