

Play Challenge Foundation Report

A small foundation pass for calm, replayable Play challenges: shared model, shared storage, shared UI chassis, final slate registry, and mobile QA.

1. Summary

Play now has a consistent foundation for five final challenge slots: Glossary Dojo, Context Stack, Probability Picker, Prompt Run, and Attention Match. The pass tracks practice progress without scores, leaderboards, streaks, or punitive states.

- Added shared Play TypeScript types for challenge metadata, attempts, outcomes, and progress.
- Added versioned localStorage helpers under `promptlife.playChallenges.v1`.
- Added reusable Play UI components and the ZenTron Paper Lab style layer.
- Replaced the old Play page sections with the final challenge slate.
- Connected Glossary Dojo, Context Stack, Prompt Run, and Attention Match to shared Play progress while preserving their existing progress systems.
- Moved Token Pipeline Relay and How AI Learns out of the normal final slate while keeping compatibility metadata.
- Updated Badge's Play stat to show final-slate challenge completion slots, without changing badge unlock rules.

2. Recommendations For The Next Pass

- Build Probability Picker next, focused on logits, softmax, sampling, and probability-is-not-truth feedback.
- Turn Attention Match into a clearer replayable matching challenge rather than the current Attention Weave bridge.
- Refactor the live Context Stack screen onto the new `PlayChallengeShell` and board primitives.
- Add a small debug-only progress bridge panel if legacy/local Play state needs to be inspected.

3. Challenges And Risks

- Legacy Play progress is split across multiple keys, so this pass bridges old progress rather than migrating or deleting it.
- Glossary Dojo still owns its mature mastery storage. The shared Play key records starts and completions only.
- Probability Picker is intentionally disabled as foundation-ready, so there is no fake completion state.
- Attention Match still uses the existing Attention Weave interaction under a clearer final-slate name.

- The existing Vite large-chunk warning remains.

4. UI Cards, Screens, Scenes, And Routes Changed

Play Page

New ZenTron Paper Lab header, calm progress panel, and final challenge slate.

Challenge Cards

Status, attempts, completion state, progress rail, 10-second idea, model move, time, and related stages.

Glossary Dojo

Start, repeat, review, and completion actions notify shared Play progress while preserving Dojo mastery.

Prompt Run

Completion now marks the shared `prompt-run` challenge complete while keeping old Prompt Run progress.

Context Stack

Insight unlock marks `context-stack` complete while preserving legacy game insight behavior.

Attention Match

Current Attention Weave is reframed as the foundation version of the final Attention Match slot.

Probability Picker

Added as a disabled foundation-ready card and placeholder route, without fake progress.

Badge

Play stat now reads `0 of 5 play challenges` and reset copy names Play challenge progress.

5. LocalStorage Keys

- Created/read/written: `promptlife.playChallenges.v1`
- Preserved/read for bridge compatibility: `promptlife:v1:gameInsights`
- Preserved/read for bridge compatibility: `pl.gameInsights`
- Preserved/read for bridge compatibility: `promptlife:v1:promptRunProgress`
- Preserved/read for bridge compatibility: `pl.promptRunProgress`
- Preserved/read for bridge compatibility: `promptlife:v1:traceComplete`
- Preserved/read for bridge compatibility: `pl.traceComplete`
- Preserved/read for bridge compatibility: `promptlife:v1:learningTourComplete`
- Preserved/read for bridge compatibility: `pl.learningTourComplete`
- Preserved/read independently by Dojo: `promptlife.glossaryDojo.v1`
- Preserved: Journey, exercise, reflection, choice-order, and Prompt Run keys.

6. Verification

- `npm run typecheck`: passed.
- `npm run build`: passed with the existing Vite large-chunk warning.

- `npm run build:pages` : passed with the existing Vite large-chunk warning after a sequential rerun. A parallel first attempt hit a temporary `dist/assets` cleanup race.
- `npm run audit:answers` : passed.
- 390px QA: Play loaded, bottom nav worked, Glossary Dojo opened, Prompt Run opened, Badge loaded, deprecated final-slate items were absent, no horizontal overflow.
- 320px QA: same checks passed; reduced-motion emulation was respected; Probability Picker remained disabled as foundation-ready.

7. Files Changed

- `src/features/play/types.ts`
- `src/features/play/storage.ts`
- `src/features/play/challengeRegistry.ts`
- `src/features/play/PlayChallengeComponents.tsx`
