

Play Slate Simplification Report

A small pass that uses the new Play Challenge Foundation to keep the visible Play page focused on five final or likely-final learning challenges.

1. Summary

The visible Play page now presents exactly five final or likely-final cards: Glossary Dojo, Context Stack, Probability Picker, Prompt Run, and Attention Match. Token Pipeline Relay and How AI Learns remain out of the normal slate.

- Confirmed the Play page is driven by the shared challenge registry.
- Simplified each visible card purpose line.
- Labeled Prompt Run as the capstone challenge and changed its action to `Start capstone`.
- Kept Probability Picker disabled as `Foundation ready` / `Coming soon`.
- Kept Attention Match visible while safely reusing the current Attention Weave route/component.
- Preserved retired compatibility handling for Token Pipeline Relay and How AI Learns.
- Bumped the app version to `v0.26.2`.

2. Recommendations For The Next Pass

- Build Probability Picker as a full decoding challenge for logits, softmax, sampling, and probability-is-not-truth.
- Replace the Attention Match bridge with a purpose-built token dependency matching activity.
- Move Context Stack onto the shared Play challenge shell for stronger visual consistency.
- Add a debug-only local progress viewer after the final Play storage shape settles.

3. Challenges And Risks

- The pass intentionally preserves old routes and progress bridges instead of deleting legacy Play code.
- Probability Picker is not playable yet; it is a disabled final-slate placeholder.
- Attention Match still uses the old Attention Weave interaction underneath.
- The existing Vite large-chunk warning remains.

4. UI Cards, Screens, Scenes, And Routes Changed

Glossary Dojo

Practice concept discrimination.

Context Stack

See what fits in context.

Probability Picker

Explore probability-shaped next-token choices.

Prompt Run

Capstone challenge: trace one prompt through the whole loop.

Attention Match

Connect a token to what it depends on.

Retired Handling

Token Pipeline Relay and How AI Learns remain compatibility-only and do not appear as normal Play cards.

5. LocalStorage Keys

- Preserved/read/written: `promptlife.playChallenges.v1`
- Preserved/read for bridge compatibility: `promptlife:v1:gameInsights`
- Preserved/read for bridge compatibility: `pl.gameInsights`
- Preserved/read for bridge compatibility: `promptlife:v1:promptRunProgress`
- Preserved/read for bridge compatibility: `pl.promptRunProgress`
- Preserved/read for bridge compatibility: `promptlife:v1:traceComplete`
- Preserved/read for bridge compatibility: `pl.traceComplete`
- Preserved/read for bridge compatibility: `promptlife:v1:learningTourComplete`
- Preserved/read for bridge compatibility: `pl.learningTourComplete`
- Preserved/read independently by Dojo: `promptlife.glossaryDojo.v1`
- Preserved: Journey, exercise, reflection, choice-order, and Prompt Run keys.

6. Verification

- `npm run typecheck`: passed.
- `npm run build`: passed with the existing Vite large-chunk warning.
- `npm run build:pages`: passed with the existing Vite large-chunk warning.
- `npm run audit:answers`: passed.
- 390px QA: exactly five visible cards; no deprecated cards; Dojo, Context Stack, Prompt Run, and Attention Match opened; Probability Picker stayed disabled; Badge loaded at `v0.26.2`; no horizontal overflow.
- 320px QA: same five-card slate, active Play nav, reduced-motion emulation, and no horizontal overflow.

7. Files Changed
