

Probability Picker v1

This pass turns Probability Picker from a foundation-ready Play card into a working four-round challenge about logits, probabilities, sampling, evidence, and temperature. It stays calm, non-competitive, and independent from Journey progress.

Summary

What Changed

- Probability Picker is now available from the Play slate with the action label **Open picker**.
- The route now launches a four-round shared-shell challenge instead of the foundation-ready placeholder.
- Progress writes through `promptlife.playChallenges.v1` with attempts, completions, last outcome, best progress, and misconception tags.
- App/package version moved to `0.27.0`.

Learner Promise

Learners practice a small but important distinction: likely next-token choices are not the same as truth. The challenge shows probability-shaped options without turning the activity into a quiz score.

Challenge Flow

Round	Purpose	Core action	Main misconception guarded
From scores to probabilities	Shows candidate raw scores and probability bars.	Choose a likely next token for a clear factual fragment.	High probability is useful fit, not magic knowledge.
Sampling can vary	Shows that more than one continuation can be plausible.	Choose either of two fitting next tokens.	Sampling is shaped choice, not one fixed answer every time.
Probability is not truth	Separates confident-looking token probabilities from evidence.	Choose the model-literacy move: mark that evidence is needed.	Probability is not proof, a source, or grounding by itself.
Temperature shapes choice	Lets learners narrow or spread the candidate set.	Tap Focused, Balanced, or Exploratory.	Temperature changes selection shape; it does not verify truth.

Copy Added

Play card: "Explore probability-shaped next-token choices." Primary action: "Open picker."

Challenge subtitle: "Choose from probabilities without treating likely as true."

Successful completion: "Completed. You saw why likely is not the same as true."

Review completion: "Completed. Review suggested. Likely and true were mixed at least once."

Storage Behavior

- Created/read/written: `promptlife.playChallenges.v1`.
- Preserved/read independently by Glossary Dojo: `promptlife.glossaryDojo.v1`.
- Preserved/read bridge keys: `promptlife:v1:gameInsights`, `pl.gameInsights`, `promptlife:v1:traceComplete`, `pl.traceComplete`, `promptlife:v1:promptRunProgress`, `pl.promptRunProgress`, `promptlife:v1:learningTourComplete`, and `pl.learningTourComplete`.
- No Journey progress, checkpoint randomization, badge criteria, games, dependencies, or generated assets were added or changed.

QA Result

Automated Mobile QA

- Happy path completed with status `completed`, 1 attempt, 1 completion, and 100% best progress.
- Review path completed with status `review-suggested`, 2 attempts, 2 completions, and 100% best progress.
- Badge page showed `1 of 5 play challenges` after Probability Picker completion.
- Reset progress cleared shared Play storage and Glossary Dojo storage.

Smoke Routes

Opened without horizontal overflow at 390px: Glossary Dojo, Context Stack, Attention Match, Prompt Run, and Probability Picker.

At 320px, the active Probability Picker start state measured `scrollWidth 320` and `clientWidth 320`.

Verification Commands

- `npm run typecheck`: passed.
- `npm run build`: passed with the existing Vite large-chunk warning.
- `npm run build:pages`: passed with the existing Vite large-chunk warning.
- `npm run audit:answers`: passed. Total surfaces: 69; randomized surfaces: 46; excluded fixed-order surfaces: 23.

Known Issues

Probability Picker v1 is intentionally a small teaching loop, not a real sampler or logits engine. It uses fixed candidate examples so the learning distinction stays legible on mobile.

Next Pass Recommendations

1. Probability Picker v2: add a clearer logits-to-softmax transformation and replayable temperature comparisons.
2. Attention Match v1: rebuild the older Attention Weave compatibility screen as a purpose-built shared-shell challenge.
3. Prompt Run v2: streamline the capstone so the full loop feels more continuous and replayable.
