

Whole Journey Review + Content Freeze Candidate

Internal report generated 2026-06-04. This PDF wraps the response summary and screenshots for the v0.13 review and implementation pass.

What Changed

New Journey cards

Added dedicated Grounding and Hallucinations cards after RAG and Retrieval.

New visuals

Added lightweight SVG/HTML visuals for Evidence Anchor and Unsupported Bridge.

Review route

Added path, recommendation, source-needed, visual-needed, and core objective metadata.

Content freeze

Created v0.13 whole-Journey review, source plan, and v1 structure proposal.

RAG, Grounding, and Hallucinations now form a clearer sequence: retrieval puts evidence into context, grounding ties the answer to evidence, and hallucination literacy reminds learners that fluent output can outrun support.

Files Changed

- `src/main.tsx`
- `src/data/content.ts`
- `src/components/VisualAids.tsx`
- `src/styles/global.css`
- `README.md`
- `docs/REVIEW_NOTES.md`
- `docs/curriculum/JOURNEY_REVIEW_V0_13.md`
- `docs/curriculum/CONTENT_FREEZE_CANDIDATE_V0_13.md`
- `docs/curriculum/SOURCE_REVIEW_PLAN_V0_13.md`

- docs/curriculum/V0_13_CHANGE_LOG.md
- docs/screenshots/v0-13-*.png

How To Run Locally

```
cd ~/Desktop/promptlife  
npm install  
npm run dev
```

Open the local URL printed by Vite. For phone testing on the same Wi-Fi network, run `npm run dev -- --host 0.0.0.0` and open the Network URL Vite prints.

What Is Done

- Grounding and Hallucinations are implemented as dedicated concise Journey cards.
- RAG remains a dedicated card and appears immediately before Grounding.
- The glossary includes Grounding, Hallucination, RAG, Retrieval, and the new Citation term.
- The review routes expose the v0.13 curriculum metadata and now scroll correctly on mobile-height windows.
- The visible app version is `v0.13.0` under the Start over panel on Badge.

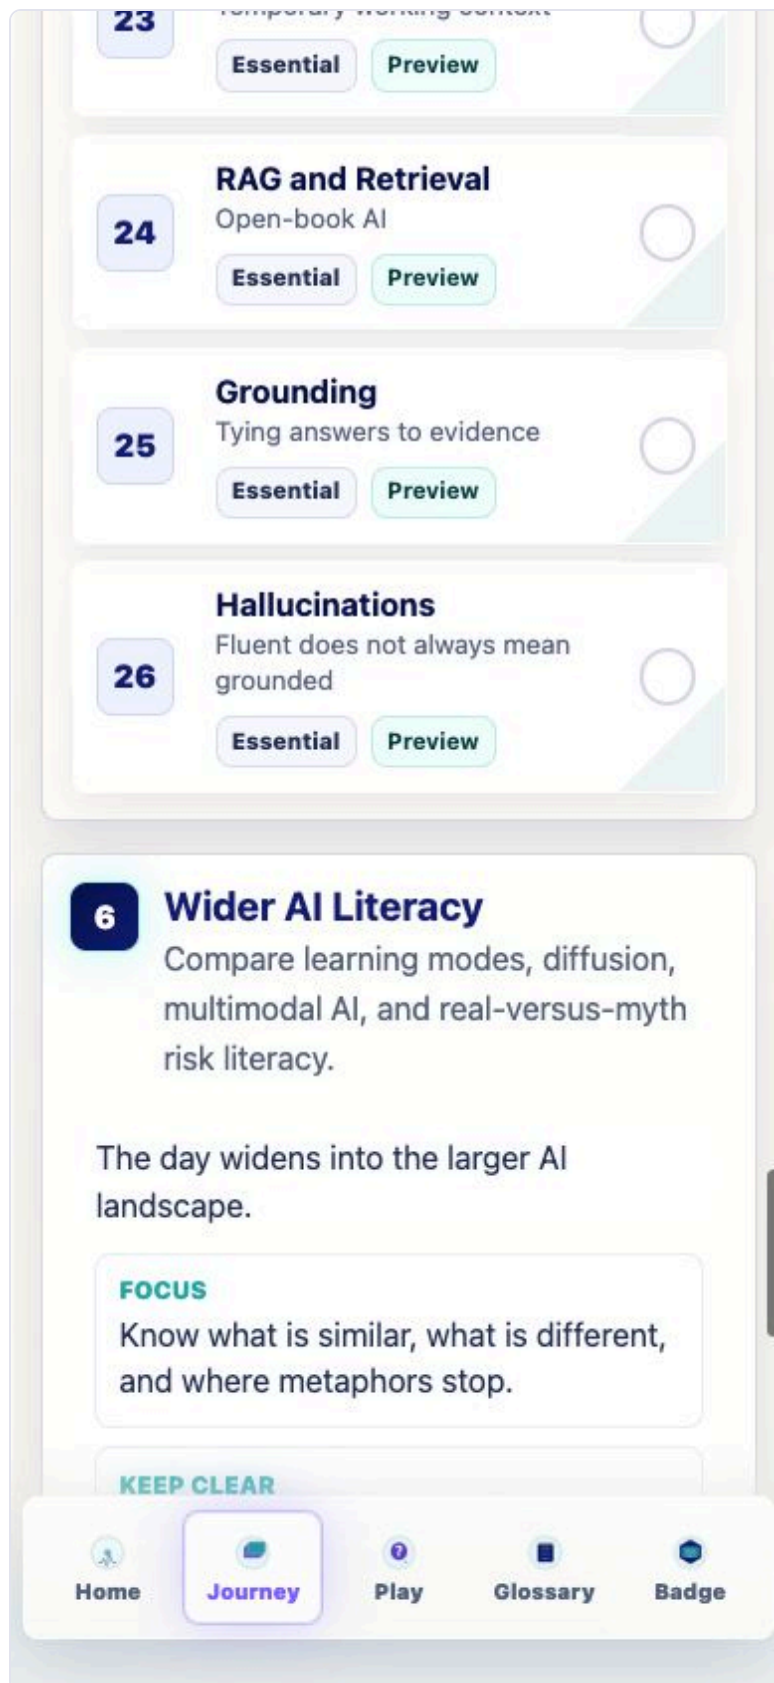

Verification

- `npm run typecheck` : passed.
- `npm run build` : passed.
- `npm run build:pages` : passed.
- Browser QA at 390px verified Journey placement, Grounding preview mode, glossary term presence, Badge version placement, review-route metadata, and review-route scrolling.
- Known build note: Vite reports a single app chunk over 500 kB after minification. No heavy dependency was added.

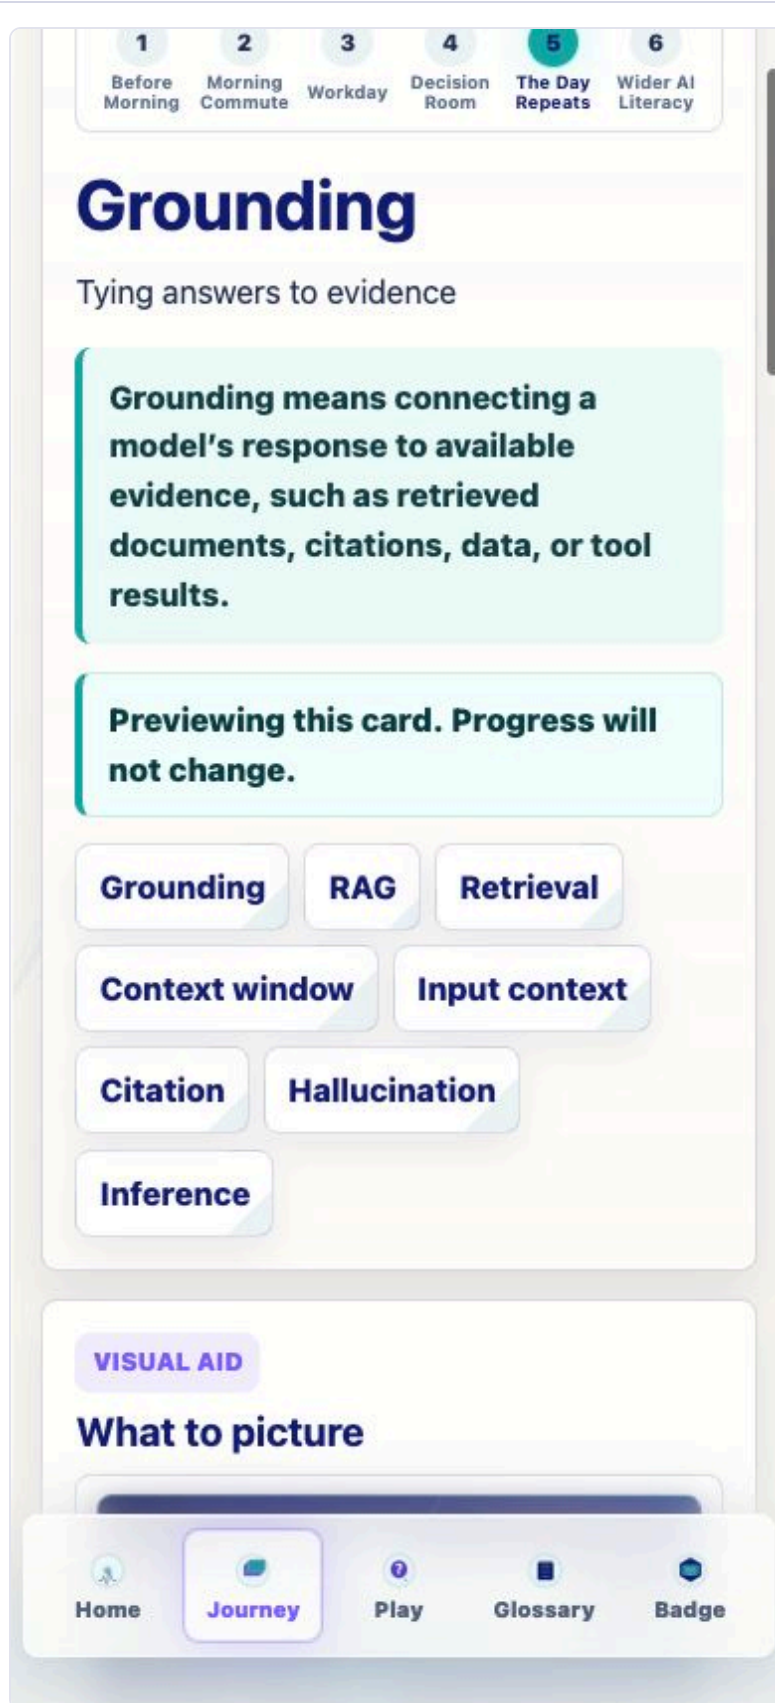

Next Three v0.2 Improvements

1. Add Journey path filtering so Essential, Deep, and Ethics/Society can be explored without making all 38 cards feel required.
2. Run the v0.13 source review plan and add source notes for environmental, labor, copyright, governance, benefit, RAG, grounding, and hallucination claims.
3. Tighten How AI Learns and Risk vs Myth now that RAG, Grounding, and Hallucinations have dedicated cards.

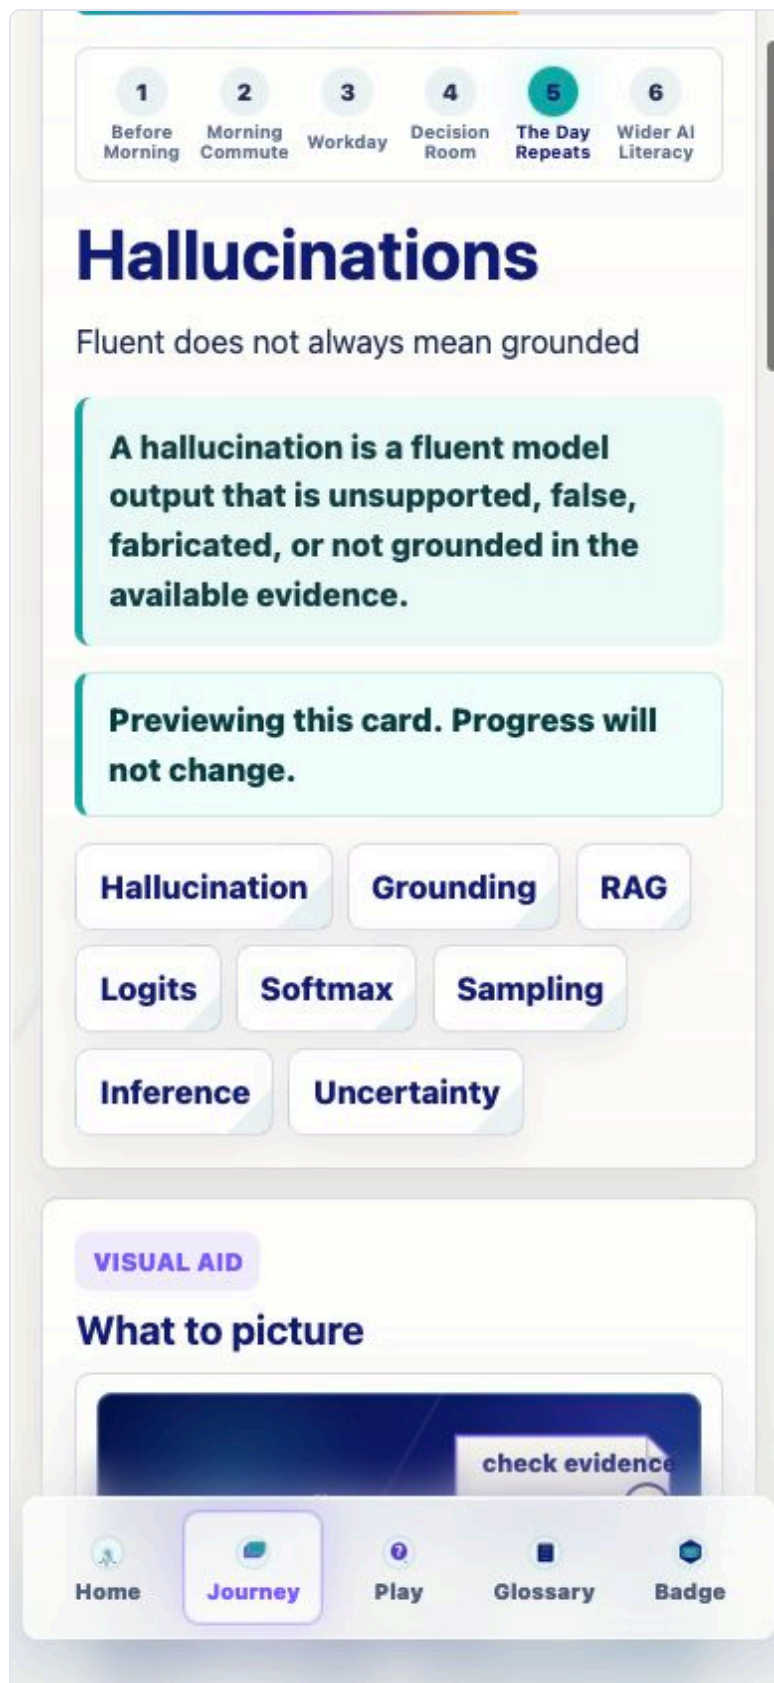

Screenshots

Journey placement: RAG and Retrieval, Grounding, and Hallucinations now appear as consecutive cards before Wider AI Literacy.

New Grounding lesson card in Preview mode.

New Hallucinations lesson card in Preview mode.

Grounding

Tying answers to evidence

Path: Essential

Stage: retrieval-inference

Recommendation: keep

Source needed: yes

Visual needed: no

Priority: low

Rubric avg: 4/5

Evidence Anchor

Tying answers to evidence

Evidence enters context so the generated response can stay connected to sources.

- 1 Evidence** Retrieved documents, data, citations, or tool results can enter the current run.
- 2 Context** The evidence becomes visible input, not permanent model memory.
- 3 Answer** The response should stay connected to the evidence while still being reviewed.
- 4 Limit** Grounding helps, but it can fail when retrieval is poor or the model misuses evidence.

Key takeaway:

Grounding helps tie an answer to evidence; it

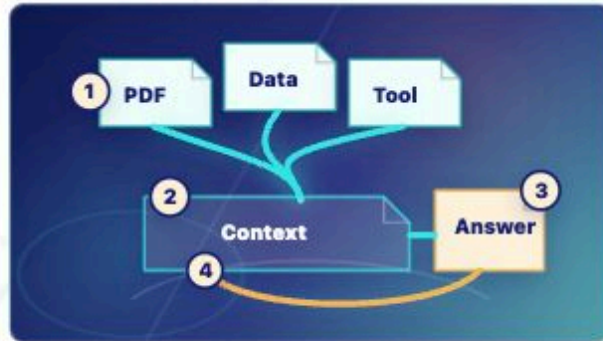

GROUNDING-EVIDENCE

Evidence Anchor

Lesson: Grounding

Pattern: groundingEvidence

Variant: retrieval-shelf

Evidence Anchor

Tying answers to evidence

Evidence enters context so the generated response can stay connected to sources.

- 1 Evidence** Retrieved documents, data, citations, or tool results can enter the current run.
- 2 Context** The evidence becomes visible input, not permanent model memory.
- 3 Answer** The response should stay connected to the evidence while still being reviewed.
- 4 Limit** Grounding helps, but it can fail when retrieval is poor or the model misuses evidence.

Key takeaway:

Grounding helps tie an answer to evidence; it does not guarantee truth.

LEARNING OBJECTIVE

Show grounding as evidence plus generated

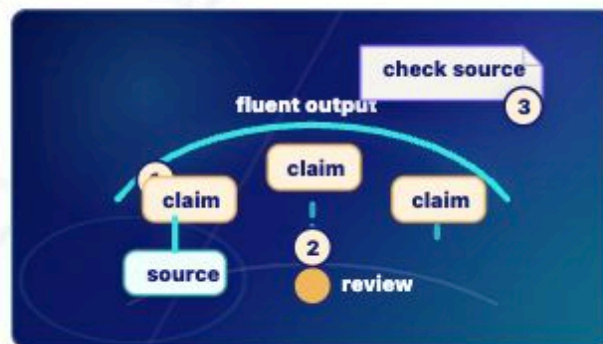

HALLUCINATION-BRIDGE

Unsupported Bridge

Lesson: Hallucinations

Pattern: hallucinationBridge

Variant: zen-garden-map

Unsupported Bridge

Fluent is not always grounded

A response can look smooth while missing evidence supports.

- 1 Fluent surface** The output may read smoothly and confidently.
- 2 Missing support** Some claims may lack evidence, citation, or retrieved context.
- 3 Generation** Likely-token generation is not the same as truth verification.
- 4 Review** Grounding, retrieval, uncertainty, and human review reduce risk but do not erase it.

Key takeaway:

Fluency is not evidence.

LEARNING OBJECTIVE

Show hallucination as fluent generated output without enough evidence support.
