

Where LLMs Fit Report

Date: June 5, 2026

This report wraps the implementation summary and screenshots for the Before Morning topology-card pass.

What Changed

- Bumped the visible app version to `v0.17.2` .
- Added `Where LLMs Fit` after `What Is an LLM?` and before `Rationalists vs Empiricists` .
- Added a coded SVG / HTML visual aid, `ai-family-tree` , with short labels and HTML callouts.
- Added the `ai-topology` tiny interaction so learners can tap a branch and reveal a one-sentence explanation.
- Updated glossary learning-path order and internal review metadata.
- Preserved checkpoint randomization, one badge, existing progress keys, games, and the no-generated-PNG constraint.

Files Changed

- `src/data/content.ts`
- `src/main.tsx`
- `src/components/VisualAids.tsx`
- `src/styles/global.css`
- `src/data/contentReview.js`
- `docs/REVIEW_NOTES.md`
- `docs/stage-audits/v0-17-before-morning/README.md`
- `docs/stage-audits/v0-17-before-morning/card-inventory.md`
- `docs/stage-audits/v0-17-before-morning/recommendations.md`
- `docs/stage-audits/v0-17-before-morning/IMPLEMENTATION_REPORT_V0_17_2.md`
- `docs/stage-audits/v0-17-before-morning/screenshot-index.md`
- `docs/stage-audits/v0-17-before-morning/prompt-life-v0-17-2-where-llms-fit-report.html`
- `docs/stage-audits/v0-17-before-morning/screenshots/` v0.17.2 screenshots

New Card Content

Title: Where LLMs Fit

Subtitle: AI → machine learning → generative AI → LLMs

Definition: A large language model is one kind of generative AI system, built with deep-learning methods inside the broader field of artificial intelligence.

Checkpoint: Which statement is most accurate? Correct: An LLM is one kind of generative AI inside the broader AI family.

Visual Aid Behavior

The diagram shows AI branching into rule-based AI and machine learning; machine learning into classical ML and deep learning; deep learning into generative AI and other deep-learning systems; and generative AI into LLMs, diffusion, and multimodal models.

The tiny interaction lets learners tap AI, Rules, Machine learning, Classical ML, Deep learning, Generative AI, LLM, Diffusion, or Multimodal to reveal a short explanation.

Glossary Updates

Added or updated: AI, machine learning, classical machine learning, deep learning, generative AI, LLM, diffusion model, multimodal AI, symbolic AI, rule-based AI, and foundation model.

LLM remains introduced by the first card. The topology terms are introduced by Where LLMs Fit.

Verification

Passed

`npm run typecheck`

Passed

`npm run build`

Passed

`npm run build:pages`

Passed

`npm run audit:answers`

68

audited answer surfaces

46

randomized surfaces

The new Where LLMs Fit checkpoint is randomized. Preview, Review, and Learn modes were smoke-tested. Browser console errors: none observed.

The build still reports the existing Vite large-chunk warning.

Known Issues

- The existing Vite large-chunk warning remains.
- The new Essential card raises the dynamic Essential lesson denominator; some local progress states may need one more Essential checkpoint.

Image 2 Readiness

Before Morning is ready for Image 2 asset generation. The new topology card should stay coded SVG/HTML for now. The next textless Image 2 candidates remain `What Is an LLM?` , `Pretraining` , `Fine-Tuning` , and `Alignment` .

Run Locally

1. `npm install`
2. `npm run dev -- --host 0.0.0.0`
3. Open `http://localhost:5173/` on this computer or the Vite network URL on a phone on the same Wi-Fi.

Journey order. Where LLMs Fit appears as card 2; Rationalists vs Empiricists follows as card 3.

MAIN PATH

Today in Prompt Life

Follow one prompt from before training through inference, generation, and model literacy.

Jump to a stage of the prompt's day.

1

Before Morning

Model shaped before use

2

Morning Commute

Text becomes numbers

3

Workday

Layers process context

4

Decision Room

One token is chosen

5

Glossary

Badge

New card top. The new lesson opens with the required title, subtitle, definition, and glossary chips.

New visual aid. The coded AI family tree is readable at mobile width with short labels and callouts.

Tiny interaction. Tapping the LLM branch reveals the one-token-at-a-time explanation and insight.

Randomized checkpoint. The correct answer is displayed by the randomized choice system, not authored position.

intelligence.

Reveal what each branch means in the AI family tree.

CHECKPOINT

Which statement is most accurate?

A Machine learning and AI mean exactly the same thing.

B Diffusion models and LLMs work the same way.

C An LLM is one kind of generative AI inside the broader AI family.

D All AI systems are LLMs.

REFLECT

Teach it back in one sentence.

Reflection is available in Learn mode.

callouts.

AI-FAMILY-TREE

AI Family Tree

Lesson: Where LLMs Fit

Pattern: aiTopology

Variant: origami-object

AI Family Tree

Where LLMs fit

AI branches into rule-based systems and machine learning; deep learning includes generative AI, including LLMs and diffusion models.

- 1 **AI** The broad field, not a synonym for LLM.
- 2 **Machine learning** Systems learn patterns from data; deep learning is one branch.

Glossary learning path. Topology terms are introduced by Where LLMs Fit.

DEFINITIONS PLUS RELATIONSHIPS

Glossary

Use each term with its neighbor. That is where the mental model gets stable.

token, tensor, softmax...

A-Z

Learning path

Learning path shows how the vocabulary builds from prompt to response.

BEFORE MORNING

LLM

A large language model is a generative AI system focused on language and code, usually generating one response token at a time.

An LLM uses deep-learning weights shaped by training, then uses inference to generate response tokens within the broader AI family.

Introduced in: What Is an LLM?
