

PROMPT LIFE V0.16.0

Source Review + Late-Day Copy Discipline Report

Date: 2026-06-05. Scope: tighten Midnight Ledger and New Dawn, add internal source review metadata, preserve the existing curriculum shape, and avoid learner-facing source clutter.

Response Summary

v0.16 adds an internal source registry and source-status mapping, then uses that review to tighten the strongest late-day claims. Midnight Ledger now speaks carefully about human-created data, unsettled provenance and compensation, infrastructure costs, privacy, labor, and practical risks. New Dawn now frames benefits through evidence tiers and keeps human responsibility central. No new Journey cards, games, generated PNG assets, heavy 3D libraries, or learner-facing PDF features were added.

What Changed

- Bumped the visible Badge version to `0.16.0`.
- Added `src/data/sourceRegistry.ts` for internal source entries and lesson source-review status.
- Added source status, source IDs, source titles, caveats, and source-needed flags to `/review/lesson-cards`.
- Tightened eight late-day lesson cards across Midnight Ledger and New Dawn.
- Added or improved source-related glossary support, including `Source review`, `Environmental footprint`, `E-waste`, and `Accountability`.

Source Discipline

- No precise energy or water statistics were added to learner-facing cards.
- No unverified papal or AI-encyclical claim appears in learner-facing copy.
- `Antiqua et nova` is treated in review notes as a Vatican AI document, not as an encyclical.
- Official governance, ethics, environmental, labor, and copyright sources are tracked in the registry.
- Claims still needing stronger evidence remain flagged internally rather than turned into confident learner copy.

Files Changed

- `src/data/content.ts`
- `src/data/sourceRegistry.ts`
- `src/main.tsx`
- `docs/REVIEW_NOTES.md`
- `docs/curriculum/SOURCE_REGISTRY_V0_16.md`
- `docs/curriculum/SOURCE_REVIEW_V0_16.md`
- `docs/curriculum/V0_16_CHANGE_LOG.md`
- `docs/curriculum/prompt-life-v0-16-source-review-report.html`
- `docs/curriculum/prompt-life-v0-16-source-review-report.pdf`

Source Review Summary

- Governance and risk: NIST AI RMF, NIST Generative AI Profile, UNESCO, OECD, EU AI Act, and Council of Europe framework convention were added to the registry.
- Human-centered ethics: Laudato Si', Dignitas Infinita, Antiqua et nova, Rome Call for AI Ethics, and verified Pope Leo XIV material are tracked internally for future curriculum review.
- Environmental and infrastructure: IEA, UNU-INWEH, and AP/UNU reporting are tracked while learner copy remains qualitative and scoped.
- Data, copyright, and labor: U.S. Copyright Office, ILO, OECD, and internal source-needed placeholders keep unsettled claims from becoming overconfident copy.

Major Copy Changes

- **Collective Intelligence, Extracted:** replaced broad consent and compensation claims with disputed provenance, consent, transparency, attribution, and compensation language.
- **Costs We Must Count:** reframed infrastructure costs as variable by workload, model, hardware, data center, cooling system, region, electricity source, and deployment choices.
- **Risk vs Myth:** sharpened real risks around privacy exposure, hallucinations, bias, prompt injection, insecure tools, overreliance, vendor lock-in, and concentration of power.
- **Benefits Worth Taking Seriously:** separated demonstrated or commonly observed uses, plausible uses, and speculative claims.
- **Human-Centered AI and Better AI:** made people, institutions, communities, governance, and accountability the center of responsibility.

Still Needs Sources

- Jurisdiction-aware evidence on data provenance, creator consent, attribution, licensing, and compensation.
- Task-specific benefit evidence for accessibility, translation, summarization, tutoring, research triage, administrative drafting, and scientific workflows.
- Education and workplace evidence for deskilling, authentic learning, and labor transition claims.
- A future standalone Prompt Injection / Tool Risk lesson, if added later, should get a security-focused source pass.

Verification

- `npm install`: passed.
- `npm run typecheck`: passed.
- `npm run build`: passed.
- `npm run build:pages`: passed.
- Browser QA at 390px: Midnight Ledger, New Dawn, revised lesson previews, internal source-review fields, glossary drawer, Journey filters, Preview/Review/Learn modes, and Journey bottom-nav return-to-top all passed.
- Source/copy scans confirmed no learner-facing precise energy/water statistics, unverified papal AI-encyclical claim, or internal source labels outside the review route.

Known issue: Vite still reports the existing single JavaScript chunk above 500 kB after minification.

Next Three Recommended Steps

- Do a focused evidence pass on benefits, especially education, research, tutoring, accessibility, and scientific workflow claims.
- Add a compact internal source dashboard or filter if the review route becomes crowded.
- Plan a dedicated Prompt Injection / Tool Risk card only if the curriculum expands in v0.17 or later.

Evidence tiers are visible in the revised Benefits lesson.

2 Plausible Tutoring support, research triage, brainstorming, and workflow support need context and evidence.

3 Speculative Broad utopia or replacement claims should not be stated as fact.

Key takeaway:
Benefits can be real and still bounded.

CORE IDEA

Core idea

Model literacy should not dismiss real help. Demonstrated or commonly observed uses include accessibility support, translation, summarization, writing assistance, coding help, document search and RAG, and administrative drafting under human review. Plausible uses include supervised tutoring support, research triage, brainstorming, and scientific workflow support in well-designed settings. Speculative claims need stronger evidence before they become promises.

MODEL LIFECYCLE
responsible AI use

WHERE IT HAPPENS
During deployment and use, when people decide what jobs to give the system and how humans review the output.

Home Journey Play Glossary Badge

Screenshot: Internal Source Review Fields

The review route shows source status, source IDs, titles, caveats, and source-needed flags for maintainers.

A screenshot of a mobile application interface showing a vertical list of review fields. The fields are: REVIEW RECOMMENDATION (keep), SOURCE STATUS (intentionally cautious), SOURCE IDS (usco-ai-copyright, source-needed-data-provenance), SOURCE TITLES (Copyright and Artificial Intelligence Initiative; SOURCE NEEDED: data provenance, consent, attribution, licensing, and compensation evidence), SOURCE CAVEAT (Keep provenance, consent, transparency, attribution, and compensation language contested rather than legally settled.), SOURCE-NEEDED FLAG (Yes. Add or maintain source review before v1 publication.), VISUAL-NEEDED FLAG (Yes. Placeholder coded visual should be reviewed or refined before v1.), VISUAL AID (collective-intelligence-lantern), and CURRENT EXERCISE (Not rendered in source direct Play). The interface has a light green header and a vertical scrollbar on the right.

REVIEW RECOMMENDATION	keep
SOURCE STATUS	intentionally cautious
SOURCE IDS	usco-ai-copyright, source-needed-data-provenance
SOURCE TITLES	Copyright and Artificial Intelligence Initiative; SOURCE NEEDED: data provenance, consent, attribution, licensing, and compensation evidence
SOURCE CAVEAT	Keep provenance, consent, transparency, attribution, and compensation language contested rather than legally settled.
SOURCE-NEEDED FLAG	Yes. Add or maintain source review before v1 publication.
VISUAL-NEEDED FLAG	Yes. Placeholder coded visual should be reviewed or refined before v1.
VISUAL AID	collective-intelligence-lantern
CURRENT EXERCISE	Not rendered in source direct Play

Screenshot: Glossary Source Review Drawer

The glossary remains usable and the Source review term opens in the preserved drawer pattern.

DEFINITIONS PLUS RELATIONSHIPS

Glossary

Use each term with its neighbor. That is where the mental model gets stable.

GLOSSARY

Close

Source review

Checking claims against credible evidence before treating them as reliable teaching content.

Relationship

Source review helps separate supported claims, cautious claims, and claims that still need evidence.

Metaphor

Reading the label before trusting the medicine.

Often confused with

Not the same as adding citations to every learner-facing sentence.
