

PROMPT LIFE V0.18.7

Glossary Dojo V1 Report

A focused mobile-first Play activity for practicing model-literacy vocabulary without scores, timers, streaks, leaderboards, or failure states.

Date: June 6, 2026

What Changed

- Added Glossary Dojo as a Play subview with 12-question rounds and four answer choices per question.
- Used ``src/data/content.ts`` glossary data as the source of truth, with a small optional metadata overlay.
- Tracked Dojo practice in ``promptlife.glossaryDojo.v1``, including current-round resume, recent mistakes, and per-term mastery.
- Added entry points from Play and Glossary while keeping Journey progress, checkpoint randomization rules, badge criteria, dependencies, generated images, and the one-badge model unchanged.
- Included the Dojo key in the app-wide Start over/debug clear path so reset clears Dojo practice too.

Implementation Details

Source Files Used

`src/data/content.ts`,
`src/utils/choiceOrder.ts`, `src/main.tsx`,
and `src/styles/global.css`.

New Files Added

`src/data/glossaryDojoMeta.ts` and
`src/features/glossary-dojo/\*` for types,
engine, storage, hook, game, and
summary UI.

Mastery Rule

Mastered after a correct answer in two
distinct rounds, or after a previously
missed term is answered correctly in a
later round.

Question Types

`term\_to\_definition`, `definition\_to\_term`,
`confusable\_pair`, `relationship`, and
`stage\_location`.

Route Integration

Play card under Glossary practice;
Glossary button labeled Practice 12 terms.
The Dojo is not added to the badge
`games` array.

Accessibility

Native buttons, visible focus, status
feedback, no positive tabindex, and text
labels for correct/incorrect state.

Verification

- `npm run typecheck`: passed.
- `npm run build`: passed with the existing Vite large-chunk warning.
- `npm run build:pages`: passed with the existing Vite large-chunk warning.
- `npm run audit:answers`: passed.
- `git diff --check`: passed.
- Browser QA passed for Play entry, Glossary entry, incorrect/correct feedback, hard-reload resume, round summary, reset/restart, and 320px/390px/430px overflow checks.
- Blocked-storage fallback is implemented in `storage.ts`; browser simulation was not practical in this environment.

Known Issues

- The first metadata overlay is intentionally partial; richer relationship and confusable-pair questions improve as metadata grows.
- The in-app browser automation focused the Start button but did not fire native button activation with its keypress command. Native button semantics and visible focus are implemented; a human keyboard spot check is recommended before v1.
- Blocked-storage fallback should get a dedicated browser test if a test runner is added later.
- The existing Vite bundle-size warning remains; this pass did not add dependencies or heavy assets.

Screenshots

Token Pipeline Relay
Explore pass, transform, and hold operators.
Action:
Toggle operators.
Teaches:
Sequence, state, and determinism.
Time:
3 min

Ready Start

Glossary practice

Glossary Dojo
Practice terms, definitions, relationships, and common mix-ups.
Action:
Start a 12-term round.
Teaches:
The vocabulary map behind model literacy.
Time:
4 min

GLOSSARY DOJO

Practice the model map

Question 1 of 12

LEARNING NEIGHBORHOOD

Which term is a neighbor of Loss in the same learning neighborhood?

Map the term without treating nearby ideas as interchangeable.

- A MLP**
A feed-forward network that transforms each token feature vector.
- B Softmax**
A function that turns next-token raw scores into probabilities that sum to one.
- C Perfect storm**
A convergence of data, compute, storage, deep-learning methods, human labor, and incentives that made modern LLMs possible.
- D Weight**
A learned number inside the model that shapes how signals are transformed.

Question 1 of 12

LEARNING NEIGHBORHOOD

Which term is a neighbor of Loss in the same learning neighborhood?

Map the term without treating nearby ideas as interchangeable.

A MLP

A feed-forward network that transforms each token feature vector.

Your choice

B Softmax

A function that turns next-token raw scores into probabilities that sum to one.

C Perfect storm

A convergence of data, compute, storage, deep-learning methods, human labor, and incentives that made modern LLMs possible.

D Weight

A learned number inside the model that shapes how signals are transformed.

Correct match

Not quite. MLP sits elsewhere in the

Home

Play

Glossary

Badge

Incorrect feedback: no shaming, explicit contrast, correct match labeled.

Which term matches this definition:

The electricity required to train, run, cool, and support an AI system.

Map the term without treating nearby ideas as interchangeable.

A Environmental footprint

The environmental effects associated with an AI system, including energy, water, carbon, land, hardware, and waste impacts.

B Forward pass

One run through the model that turns the current context into next-token scores.

C Overfitting

A training failure mode where a model fits training examples too narrowly and performs worse on new examples.

D Energy use

The electricity required to train, run, cool, and support an AI system.

Correct match

Insight strengthened. Energy use means

The electricity required to train, run, cool, and support an AI system.

Question 2 of 12

MEANING TO TERM

Which term matches this definition:
The electricity required to train, run, cool, and support an AI system.

Map the term without treating nearby ideas as interchangeable.

A

Environmental footprint

The environmental effects associated with an AI system, including energy, water, carbon, land, hardware, and waste impacts.

B

Forward pass

One run through the model that turns the current context into next-token scores.

C

Overfitting

A training failure mode where a model fits training examples too narrowly and performs worse on new examples.

D

Energy use

The electricity required to train, run, cool, and support an AI system.

Journey

Play

Glossary

Badge

Hard reload resume: Play card resumes the saved round.

C

Completion

The generated text that follows a prompt, assembled from response tokens.

D

E-waste

Discarded electronic equipment and hardware that can create material, pollution, and disposal burdens.

Not quite. Preference optimization is a real term, but the easy mix-up here is AI. Machine learning means Machine learning systems learn patterns from data.; AI means AI is the broad field, not just chatbots or LLMs.

DEFINITIONS PLUS RELATIONSHIPS

Glossary

Use each term with its neighbor. That is where the mental model gets stable.

PRACTICE MODE

Glossary Dojo

Practice twelve terms through definitions, relationships, and common mix-ups.

Practice 12 terms

Search terms

token, tensor, softmax...

A-Z

Learning path

Find terms alphabetically.

Accessibility

Designing tools and materials so more people can perceive, understand, navigate, and participate.

AI can support accessibility through drafting, summarization, translation, captioning, alternate formats, and assistive workflows when reviewed carefully.

Accountability

Clear responsibility for decisions, harms
