

Prompt Life v0.28.1 Final Response With Screenshots

Generated 2026-06-13T18:54:39.379Z. This wraps the v0.28.1 language cleanup and visual-aid hard reset response with representative screenshots.

39

Journey visuals

0

P0/P1 remaining

19

visuals fixed

3

temporary/testable

What Changed

- Removed banned model-mystery wording from current learner-facing source/docs and added `npm run audit:language`.
- Added `npm run audit:visual-overflow` for 320px and 390px review-route overflow checks.
- Mapped all 39 Journey visuals to one of six canonical templates.
- Rebuilt or simplified 19 visual aids, keeping precise instructional text in HTML callouts and shortening diagram labels.
- Captured every visual at 390px and 320px, plus smoke screenshots for Journey, Play, Glossary, and Badge.
- Bumped visible/package version to `v0.28.1`.

Language Replacements

Current learner-facing copy now uses mechanism-centered language such as *unexplained shortcut*, *unsupported story*, *single event*, *special wording*, *built-in morality*, and *hidden model powers* depending on context. The new language audit passes against current source/docs.

Template Distribution

Template	Count
Atmospheric Scene	3
Taxonomy Map	11
Comparison Board	9
Mechanism Flow	9
Probability Bars	3
Context Tray / Stack	4

Verification

Command / QA	Result
<code>npm run typecheck</code>	Passed
<code>npm run build</code>	Passed; existing large-chunk warning remains
<code>npm run build:pages</code>	Passed; existing large-chunk warning remains
<code>npm run audit:answers</code>	Passed
<code>npm run audit:checkpoints</code>	Passed
<code>npm run audit:question-clues</code>	Completed; 43 answer-length warnings and 36 term-echo candidates remain as review signals
<code>npm run audit:learner-copy</code>	Passed
<code>npm run audit:language</code>	Passed
<code>npm run audit:visual-aids</code>	Passed: 39 aids, 0 mismatches, 0 readiness issues
<code>npm run audit:visual-overflow</code>	Passed: 39 aids at 320px and 390px

Command / QA	Result
Browser QA	Badge, Journey, Play, and Glossary checked with no horizontal overflow; Badge shows v0.28.1

Known Issues

- Three visuals remain temporary but acceptable for small testing: Overfitting vs Generalization, Feature Vector, Tensor Block.
- Seven later Image 2 candidates remain: Prompt to Prediction, Broad Pretraining, Alignment Landscape, Borrowed Flames, Cost Ledger, Benefit Tiers, Accountability Flow.
- The Vite large JavaScript chunk warning remains and should be handled in a later code-splitting pass.

Representative Screenshots

MAIN PATH

Today in Prompt Life

Follow one prompt from before training through inference, generation, and model literacy.

Jump to a stage of the prompt's day.

1 Before Morning Model shaped before use	2 Morning Commute Text becomes numbers	3 Workday Layers process context	4 Decision Room One token is chosen
5 Day Repeats Context grows + expires	6 Twilight Wider AI landscape	7 Midnight Ledger Costs and shadows	8 New Dawn Human centered AI

All stages follow one prompt through the full day: before training, through inference, generation, evidence, risks, costs, and better human use.

1

Before Morning

The model is shaped before your prompt arrives.

The prompt has not arrived yet. The model is being shaped before ordinary use.

DEFINITIONS PLUS RELATIONSHIPS

Glossary

Use each term with its neighbor. That is where the mental model gets stable.

PRACTICE MODE

Glossary Dojo

Practice twelve terms through definitions, relationships, and common mix-ups.

Practice 12 terms

Search terms

token, tensor, softmax...

A-Z

Learning path

Find terms alphabetically.

Accessibility

Designing tools and materials so more people can perceive, understand, navigate, and participate.

AI can support accessibility through drafting, summarization, translation, captioning, alternate formats, and assistive workflows when reviewed

Fine-Tuning Path

Durable adaptation, not current-run steering

Fine-tuning can durably adapt model behavior through additional training or adapters; prompts, RAG, and sampling steer only the current run.

- 1 Durable adaptation** Additional training or adapters can change how future runs behave.
- 2 Prompt steering** A prompt can steer this run without changing weights.
- 3 RAG and context** Retrieved text can enter the current context without training the model.
- 4 Sampling later** Decoding still chooses one next token from probabilities during inference.

Key takeaway:

Fine-tuning changes future behavior; prompting, RAG, and sampling operate during the current run.

Fine-Tuning Path 390

Fine-Tuning Path

Durable adaptation, not current-run steering

Fine-tuning can durably adapt model behavior through additional training or adapters; prompts, RAG, and sampling steer only the current run.

- 1 Durable adaptation** Additional training or adapters can change how future runs behave.
- 2 Prompt steering** A prompt can steer this run without changing weights.
- 3 RAG and context** Retrieved text can enter the current context without training the model.
- 4 Sampling later** Decoding still chooses one next token from probabilities during inference.

Key takeaway:

Fine-tuning changes future behavior; prompting, RAG, and sampling operate during the current run.

Fine-Tuning Path 320

Learning Modes Matrix

Durable change or current-run steering

Training, fine-tuning, feedback, prompting, RAG, and evaluation affect different parts of an AI system.

- ① **Training** Pretraining and fine-tuning can durably update weights or adapter weights.
- ② **Prompting** Prompts and in-context examples steer the current run.
- ③ **RAG** Retrieval adds outside material to context; it does not normally train the model.
- ④ **Evaluation** Review and tests can help future systems when results feed development or training.

Key takeaway:

Not all useful AI behavior is durable learning.

Learning Modes Matrix 390

Media Lane Map

Input, representation, output

Multimodal systems connect text, images, audio, video, and code through learned representations or linked components.

- **Inputs** Text, image, audio, video, or code can enter the system.
- **Representation** The system encodes media into model-usable representations or linked spaces.
- **Outputs** Depending on the system, outputs may be answers, captions, images, audio, or code.
- **Limit** Multimodal processing is not human sensation or experience.

Key takeaway:

Multimodal means more than one media type, not human-like perception.

Media Lane Map 320

Convergence, not one spark.

Storm Front

Why LLMs arrived now

Data, compute, storage, methods, labor, and incentives converged into modern LLM capability.

- **Data** Human-created text, media, code, and documents supplied patterns.
- **Compute and storage** Hardware, data centers, datasets, and checkpoints made large-scale training practical.
- **Methods** Deep learning and transformer advances made the patterns usable.
- **Labor and incentives** Human evaluation work and market demand pushed systems into products.

Key takeaway:

Modern LLMs came from a convergence, not a single spark.

Storm Front 390

Cost Ledger

The answer is not weightless

AI systems depend on infrastructure, human systems, and governance choices that need honest accounting.

- **Infrastructure** Energy, water, carbon, data centers, chips, and e-waste vary by system and workload.
- **Human systems** Labor disruption, deskilling, privacy, bias, and information pollution depend on deployment choices.
- **Power** Concentration of data, compute, and capital affects who benefits and who decides.

Key takeaway:

Costs vary, but they are real enough to count.

Cost Ledger 320

Accountability Flow

Tools should serve dignity

A human-centered deployment treats AI output as support inside a decision context, then keeps review, governance, and accountable action with people.

- **Human judgment** People remain accountable for high-stakes decisions and institutional use.
- **Dignity** Speed, profit, and automation should not outrank persons, learning, or relationships.
- **Model limit** A model can sound ethical without moral understanding.

Key takeaway:

Powerful tools still need human purpose.

Accountability Flow 390

Full Chain Map

Mechanics plus judgment

Model literacy connects prompt, tokens, IDs, embeddings, hidden states, logits, probabilities, sampling, append-and-repeat generation, RAG, grounding, review, and accountability.

- **Machine chain** Prompt context becomes tokens and IDs, then embeddings, hidden states, logits, probabilities, and sampled response tokens.
- **Evidence chain** Context windows, RAG, and grounding can add evidence for this run, but they do not guarantee truth.
- **Human chain** Benefits, costs, review, governance, and accountability remain human responsibilities.

Key takeaway:

Mechanics matter, and humans remain responsible.
