

Prompt Life v0.28.1 Visual Aid Human Feedback Sheet

Generated 2026-06-13T18:48:56.795Z for Prompt Life v0.28.1.

Prompt Life is under construction and preparing for small human testing. The badge is not issued yet. Please look for visual clarity, not perfection.

For Each Visual Aid You Notice

- What do you think the picture is trying to show?
- What part helped?
- What part confused you?
- Could you read the labels?
- Did the caption explain the picture?
- Did the visual feel necessary or decorative?
- Did it help you understand the model?
- What would you remove or simplify?

Please Flag

- Tiny text
- Unclear arrows
- Too many objects
- Unexplained jargon
- Decorative but unhelpful art
- A visual that contradicts the lesson
- A visual that feels like a generic AI picture

Visuals To Watch Closely

- Feature Vector: Distributed side may feel abstract; tester feedback should guide simplification.
- Tensor Block: Axis labels must stay outside crowded cells.
- Overfitting vs Generalization: Validation markers must remain readable at 320px.
- Text to Tokens: Long token rows must wrap without horizontal overflow.
- MLP Feature Workshop: Avoid adding feature names to the bars.
- Transformer Stack: Keep block text short; no layer-by-layer story.
- Hidden State Flow: Keep embedding and hidden-state labels visibly distinct.

- Alignment Landscape: Avoid morality imagery that makes the model seem conscious.
- Borrowed Flames: Later atmospheric image could improve warmth, but current coded flow is readable.
- Cost Ledger: Later atmospheric image could improve tone; no numbers should be added.

How To Report

For each confusing visual, note the card title, what you thought it meant, and where your attention went first. It is especially useful to say whether the caption fixed the confusion or whether the picture itself needs to be simpler.
