

PROMPT LIFE V0.16.1

Checkpoint Randomization + Assessment Integrity Report

Date: 2026-06-05. Scope: randomize answer order for Journey checkpoints and applicable single-choice exercises while preserving correctness, feedback, progress behavior, accessibility, and reviewability.

Response Summary

v0.16.1 breaks the correct-answer-first pattern. Journey checkpoints now render from stable normalized choices, and single-choice exercises use the same per-device deterministic shuffle. Correctness follows answer identity, not A/B/C/D position. Ordered, matched, sorted, token-label, toggle, connect-node, and multi-select exercises remain fixed when order or grouping supports the learning goal.

What Changed

- Bumped visible app version to `0.16.1`.
- Added `src/utils/choiceOrder.ts`.
- Randomized Journey checkpoints with stable per-question choice IDs.
- Randomized `tap-choice` and `next-token-pick` exercises.
- Added `npm run audit:answers`.
- Updated Badge reset copy to include the choice-order seed.

Randomization

- Seed key: `promptlife:v1:choiceOrderSeed`.
- Question identities: `lesson:{id}:checkpoint` and `exercise:{id}`.
- Shuffle: deterministic Fisher-Yates.
- Fallback: deterministic seed if localStorage is unavailable.
- Reset clears the seed with the rest of Prompt Life progress.

Files Changed

- `package.json`
- `scripts/audit-answers.mjs`
- `src/components/ExerciseSystem.tsx`
- `src/main.tsx`
- `src/styles/global.css`
- `src/utils/choiceOrder.ts`
- `docs/REVIEW_NOTES.md`
- `docs/curriculum/CHECKPOINT_RANDOMIZATION_AUDIT_V0_16_1.md`
- `docs/curriculum/CHECKPOINT_RANDOMIZATION_V0_16_1.md`
- `docs/curriculum/prompt-life-v0-16-1-checkpoint-randomization-report.html`
- `docs/curriculum/prompt-life-v0-16-1-checkpoint-randomization-report.pdf`
- `docs/screenshots/v0-16-1-*.png`

Audit Result

- Total audited surfaces: 61.
- Randomized surfaces: 45.
- Fixed-order exclusions: 16.
- First correct answer positions after audit-seed shuffle: position 1 = 9, position 2 = 19, position 3 = 9, position 4 = 8.

QA Result

- `npm run typecheck` : passed.
- `npm run build` : passed with the existing Vite large-chunk warning.
- `npm run build:pages` : passed with the existing Vite large-chunk warning.
- `npm run audit:answers` : passed.
- Browser QA at 390px passed for Learn, Preview, Review, Prompt Run single-choice exercise behavior, and Badge reset/version copy.

Known issue: Vite still reports the existing single JavaScript chunk above 500 kB after minification.

Next Three Recommended Steps

- Add a regression test around the shuffle helper.
- Add an optional internal answer-order review screen if future reviewers want visual inspection.
- Revisit multi-select randomization only if user testing shows authored grouping creates bias.

Screenshot: Training Shuffled Checkpoint

Correct answer appears in B, with A/B/C/D assigned after shuffle.

Screenshot: Training Correct Feedback

Correct selection preserves Insight unlocked feedback and unlocks the next action.

Screenshot: Prompt Run Exercise Shuffled

ExerciseShell single-choice items are shuffled while item identity remains stable.

Screenshot: Prompt Run Exercise Feedback

Correct exercise feedback enables Continue without relying on option position.

Screenshot: Badge Reset Copy

Badge page shows v0.16.1 and documents that reset clears the choice-order seed.
