

Badge version label

Added a stable, light version number under the Badge page Start over panel. It is right-aligned with the panel and now reads `v0.5.1`.

Files changed

- `src/main.tsx`
- `src/styles/global.css`
- `docs/screenshots/v0-5-badge-version-mobile.png`
- `docs/prompt-life-v0-5-1-version-report.pdf`

How to run locally

- `cd /Users/kevinhegg/Desktop/promptlife`
- `npm install`
- `npm run dev`
- Open `http://localhost:5173/`.

What is done

- Added `APP_VERSION = 0.5.1` in the app shell.
- Rendered `v0.5.1` directly under the Start over panel on Badge.
- Styled it as small, light, right-aligned text with stable height.
- Added a maintenance comment so future changes bump the version.

Verification

- `npm run typecheck` : passed
- `npm run build` : passed
- `npm run build:pages` : passed
- Browser check: `v0.5.1` visible on Badge.

Next three improvements

- Move app metadata into a small dedicated module if more metadata appears.
- Consider showing build date only in debug mode.
- Add a tiny version bump checklist to future release notes.
