

PROMPT LIFE V0.22.1 PASS, VISIBLE APP V0.22.2

Glossary Dojo Round Variety + Distractor Strategy

Date: 2026-06-07

This report wraps the implementation summary, QA findings, and screenshots for the Glossary Dojo round-strategy pass.

What Changed

- Added normal-round target fingerprints so Start next round avoids exact repeated 12-term sets when possible.
- Added Dojo round history and normal-round fingerprint storage with migration fallback for older saved progress.
- Kept Repeat this round exact by reusing stored target terms and question specs.
- Kept Review missed questions focused on missed specs from the most recent completed round.
- Changed normal target selection to a frontier-and-review blend.
- Made distractors inspectable as near, medium, and far learning-path choices with confusable/related metadata fallbacks.
- Added small results action copy for fresh, repeat, and missed-review rounds.
- Fixed one-question review summary wording: 1 question and Everything in this round strengthened.

Counts And Strategy

Glossary Coverage

- Total glossary terms counted: 122
- Available Dojo terms after normalization: 122
- Normal round size: 12
- Approximate full-coverage cycle: 10 full rounds, plus 2 terms

Round Modes

- `new_round` : fresh 12-term normal round when possible.
- `repeat_round` : same stored target set/question specs, incremented repeat count.
- `review_missed` : only missed question specs, shorter when needed.

Verification

typecheck: passed

build: passed

build:pages: passed

audit:answers: passed

normal fingerprints: differed

repeat fingerprint: matched

review missed: 1 target

320px overflow: none

Builds passed with the existing Vite large-chunk warning.

QA Fingerprints

First Normal Round

completion|deep-learning|embedding|generated-token|generative-ai|input-context|llm|machine-learning|model-output|response-so-far|tensor|weight

Second Normal Round

classical-machine-learning|distributed-representation|embedding|embedding-table|empiricism|llm|next-token|pretraining|prompt-tokens|response-so-far|symbolic-ai|weight

Repeat Round

Used the second normal fingerprint again with `sourceMode: repeat_round`, `targetCount: 12`, and `repeatCount: 1`.

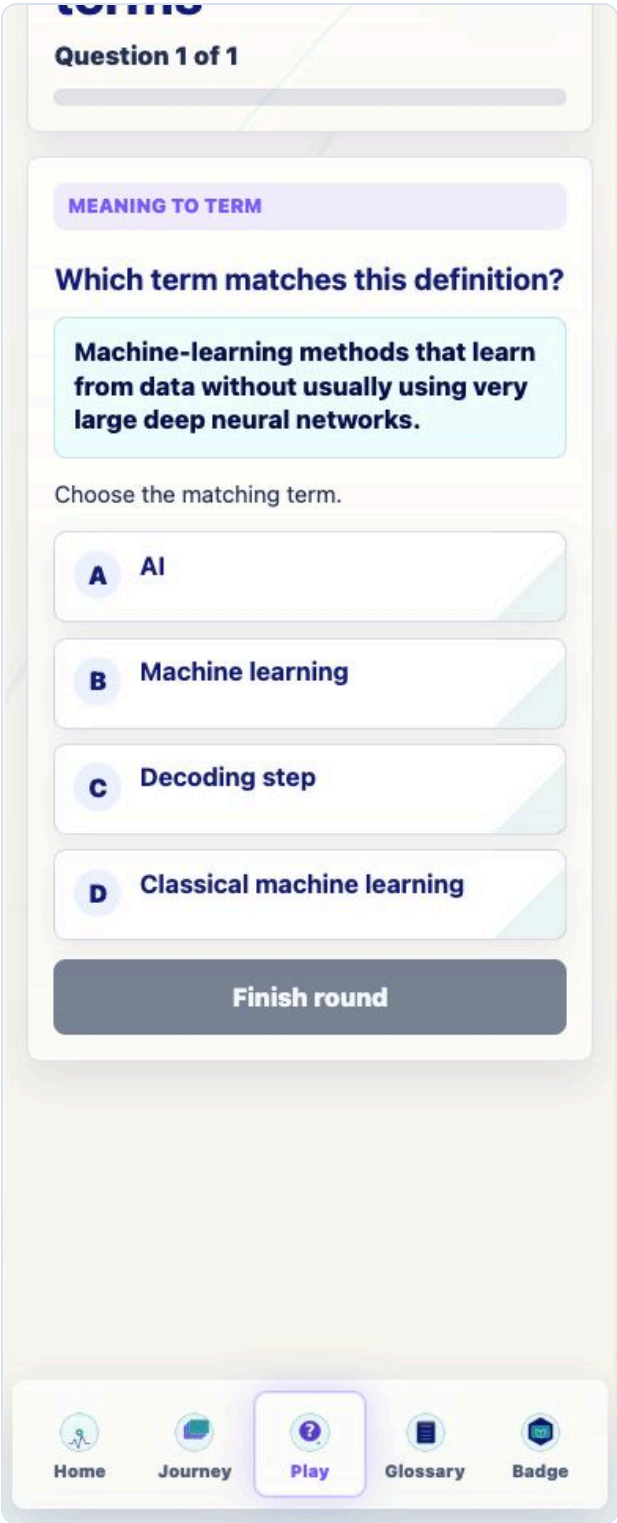

Review Missed

Started with `sourceMode: review_missed`, `targetCount: 1`, and `total: 1`.

Screenshots

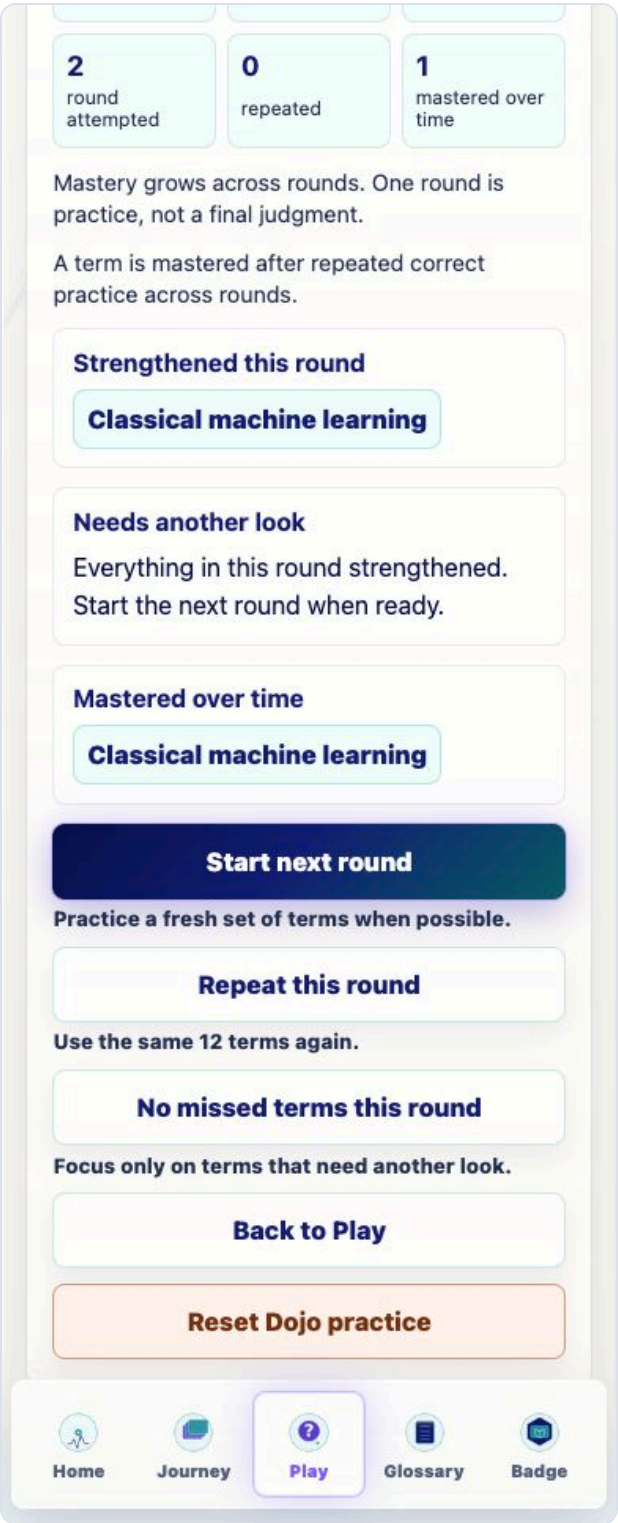

Review Missed At 390px

A focused one-question review round from the missed term.

Results Actions At 390px

Shows fresh/repeat/review action copy near the buttons.

Results At 320px

Narrow-phone check with no horizontal overflow.

Known Issues

- New normal rounds avoid exact repeated term sets when possible, but repeats are allowed after the practical glossary cycle is exhausted.
- Relationship and stage-location question variety still depends on metadata coverage.
- The existing Vite large-chunk warning remains.

Next Three Steps

- Add a small developer-only test harness for Dojo round generation.
- Continue enriching metadata for relationship and stage-location question variety.
- Consider bundle splitting once the MVP curriculum stabilizes.
