

Prompt Life Midnight Ledger Stage Audit

v0.24 documentation-only audit. Generated 2026-06-07T16:47:55.373Z.

Current Midnight Ledger has three cards: Collective Intelligence, Extracted; Costs We Must Count; Risk vs Myth. Prompt Injection / Tool Risk is present as a term and risk example, not a standalone card.

Major Findings

- Content is serious, cautious, and mostly source-aware.
- Costs We Must Count most needs a better visual; it is the top future Image 2 candidate.
- Collective Intelligence and Costs We Must Count have mismatched tiny interactions.
- Risk vs Myth should move to the richer lesson schema and use a multi-item risk/myth sort.
- No progress changed during Preview-mode QA.

Verification

- npm run typecheck: passed.
- npm run build: passed with existing large-chunk warning.
- npm run build:pages: passed with existing large-chunk warning.
- npm run audit:answers: passed.
- Home assets loaded: yes.
- Visual review detected all Midnight visuals: yes.

Lesson QA

Lesson	Visual	Interaction	Overflow	Terms
Collective Intelligence, Extracted	Borrowed Flames	Follow the borrowed flames	No	Collective intelligence, Training data, Data provenance, Consent, Compensation, Copyright, Human feedback labor
Costs We Must Count	Invisible Factory	Map the hidden factory	No	Environmental footprint, Energy use, Water use, Carbon emissions, Data center, E-waste, Copyright, Labor disruption, Deskilling, Privacy, Governance
Risk vs Myth	Risk or Myth	Sort risk from myth	No	Inference, Training, Context window, Privacy, Hallucination, Prompt Injection

Recommended Next Prompt

Implement a small v0.24.1 Midnight Ledger repair pass. Keep the order: Collective Intelligence, Costs We Must Count, Risk vs Myth. Convert Risk vs Myth to the richer lesson schema, repair Collective's lantern label and interaction, rebuild Costs as a ledger/infrastructure visual with cost-entry interaction, and upgrade Risk vs Myth to a mechanism-based coded split plus multi-item risk sort. Preserve progress, badge logic, checkpoint randomization, games, dependencies, generated PNG constraints unless explicitly approved, and Glossary Dojo behavior.

Screenshots

Today in Prompt Life

Follow one prompt from before training through inference, generation, and model literacy.

Jump to a stage of the prompt's day.

1 Before Morning Model shaped before use	2 Morning Commute Text becomes numbers	3 Workday Layers process context	4 Decision Room One token is chosen
5 Day Repeats Context grows + expires	6 Twilight Wider AI landscape	7 Midnight Ledger Costs and shadows	8 New Dawn Better human use

All stages follow one prompt through the full day: before training, through inference, generation, evidence, risks, costs, and better human use.

1 Before Morning

The model is shaped before your prompt arrives.

The prompt has not arrived yet. The model is being shaped before ordinary use.

The screenshot displays the 'Midnight Ledger' app interface. At the top, a dark blue header contains the number '7' and the title 'Midnight Ledger'. Below this, a subtitle reads: 'Count the costs, shadows, and debts honestly.' The main content area features a grid of journal entries. The first entry, titled 'The instant answer is weighed against data, labor, infrastructure, privacy, and power.', includes two sections: 'FOCUS' (What costs and debts must be counted.) and 'KEEP CLEAR' (The answer feels weightless; the infrastructure is not.). Below this are three more entries, each with a number in a blue circle, a title, a subtitle, and a 'Preview' button: '32 Collective Intelligence, Extracted' (No creators, no model), '33 Costs We Must Count' (The answer feels weightless. The infrastructure is not.), and '34 Risk vs Myth' (Practical institutional literacy). The bottom navigation bar has five icons: 'Home' (a person), 'Journey' (a book, highlighted with a purple border), 'Play' (a question mark), 'Glossary' (a book), and 'Badge' (a shield).

VISUAL AID

What to picture

Borrowed Flames

No creators, no model

Model usefulness depends on patterns from human-created language, art, code, research, and culture.

- 1 Human expression** Books, sites, code, art, journalism, forums, documentation, and research leave learnable traces.
- 2 Collection questions** Consent, transparency, provenance, copyright, and compensation matter.
- 3 Model limit** The model absorbs patterns statistically; it does not understand gratitude or responsibility.

Key takeaway:

The model did not create its abilities alone.

VISUAL AID

What to picture

Invisible Factory

The answer is not weightless

AI systems can carry physical, labor, privacy, cultural, and power costs that need honest accounting.

1 Infrastructure

Energy, water, carbon, data centers, chips, and e-waste vary by system and workload.

2 Human systems

Labor disruption, deskilling, privacy, bias, and information pollution depend on deployment choices.

3 Power

Concentration of data, compute, and capital affects who benefits and who decides.

Key takeaway:

Costs vary, but they are real enough to count.

TINY INTERACTION

Map the hidden factory

Claim: Uploading private student records to a public chatbot can expose sensitive data.

Real risk

Myth

Energy, water, land, hardware, data, labor, privacy, and power are all part of responsible AI literacy.

CHECKPOINT

Which statement is most responsible?

A All AI costs are identical everywhere

B AI costs vary and should be counted before decisions

C Digital systems have no physical costs

5/6

TINY INTERACTION

Sort risk from myth

Claim: Uploading private student records to a public chatbot can expose sensitive data.

Real risk

Myth

Real: privacy exposure, hallucinations, bias, prompt injection, insecure tools, overreliance. Myth: the model secretly trains itself during ordinary chat.

CHECKPOINT

Which is a real institutional risk?

A Softmax stealing files

B Uploading private data

C The model becoming conscious in the chat
